

Metalni instalacijski kanali LKM: Pouzdana zaštita za kabele

S optimiziranim prstenima za zaštitu rubova

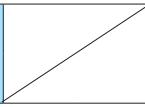

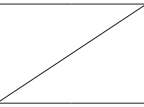

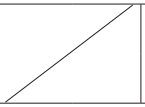

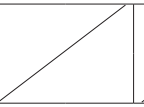

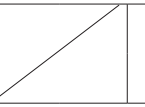

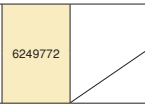

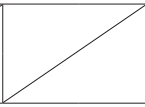

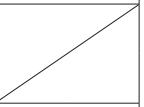

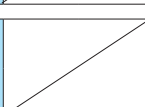

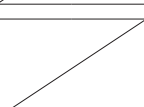

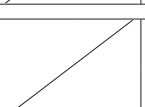

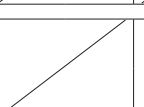

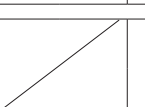

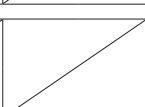

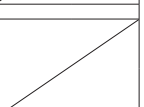

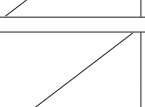

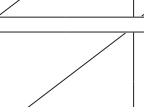

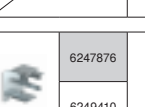

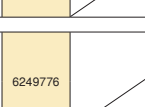

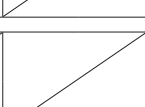

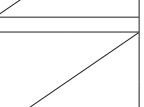

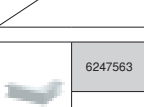

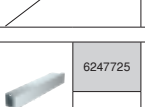

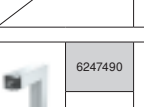

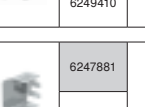

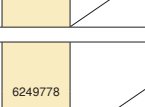

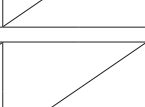

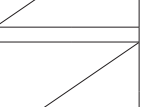

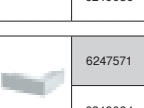

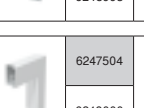

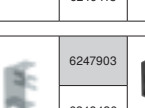

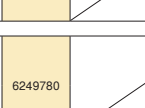

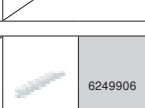

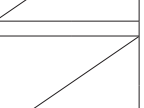

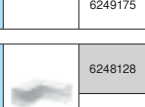

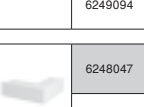

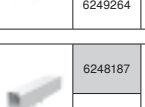

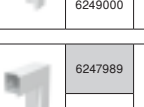

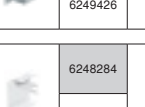

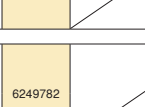

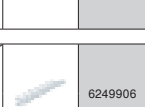

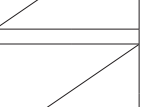

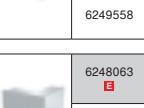

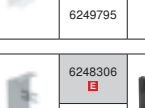

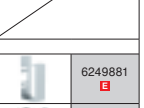

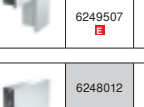

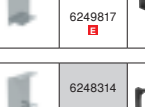

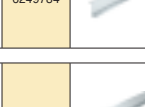

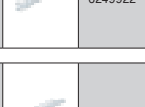

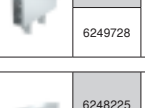

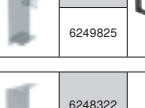

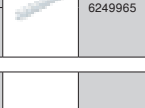

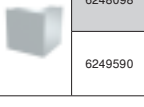

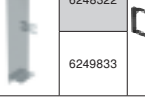

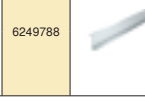

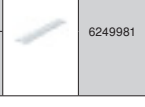

Optimizirani zaštitni prstenovi s poboljšanom funkcionalnošću i mogućnošću naknadne ugradnje – također i na kanale koji su već ispunjeni kabelima.

- Čelični kanali dostupni su u deset različitih veličina i dvije izvedbe površine: galvanski pocinčani FS i galvanski pocinčani te dodatno plastificirani u bijeloj boji FSK.
- Izjednačenje potencijala između poklopca i osnove kanala osigurano je bez dodatnog pribora.
- Program se sastoji od dodatnog pribora za vertikalnu i horizontalnu montažu, kao i za montažu na strop.
- Prsteni za zaštitu rubova prikladni su za jednostavnu naknadnu ugradnju, a završni dijelovi izrađeni su od plastike.
- Kanali tipa LKM 20030 i LKM 60100 su isto tako testirani kao specijalni kanali za provođenje kabela za očuvanje funkcija sukladno HRN DIN 4102 dio 12.
