1 About these instructions

1.1 Target group

- These mounting instructions are intended for the following target group:
- Engineers and architects charged with the planning of cable support systems with cable trays.
- Electrically trained specialists charged with installing cable support systems and cable trays.

1.2 Relevance of these instructions

These instructions are based on the standards valid at the time of compilation (12/2023).

Please read the instructions carefully before starting mounting. We will not accept any warranty claims for damage caused through non-observance of these instructions.

Any images are intended merely as examples. Mounting results may look different.

In these instructions, cables and lines are referred to simply as cables.

1.3 Types of warning information

WARNING

Type of risk!

Shows a risky situation. If the warning information is not observed, then serious or fatal injuries may occur.

CAUTION

Type of risk!

Shows a risky situation. If the warning information is not observed, then medium or minor injuries may occur.

CAUTION

Type of risk!

Shows a risky situation. If the warning information is not observed, then damage to the product or the surroundings may occur.

Note!

Indicates important information or assistance.

1.4 Depiction conventions

Explanation of the depictions used:

Correct design

Incorrect design

1.5 Basic standards and regulations

The screw-on cable tray systems fulfil the requirements of "IEC 61537:2006 – Cable management – Cable tray systems and cable ladder systems" for the low-voltage area.

1.6 Applicable documents

- Declaration of conformity, see
www.obo.global/service/downloads/declarations-of-conformity/

Mounting instructions for different support structures:

- U support systems, see
www.obo.de/out/media/04-150_MA_U_support_systems.pdf

www.obo.de/out/media/04-150_MA_I_support_systems.pdf
- Universal systems, see
www.obo.de/out/media/04-150_MA_Universal_systems.pdf
- Trapezoidal systems, see
www.obo.de/out/media/04-150_MA_TP_support_systems.pdf
- Clamp fastenings, see
www.obo.de/out/media/04-150_MA_Clamp_fastening_systems.pdf

2 Intended use

The screw-on cable tray systems are used to support and route all kinds of cables, taking the approved load values into account. Depending on the corrosion protection used, they can be mounted both indoors and outdoors.

The cable tray systems are suitable for use at ambient temperatures of -20°C to 120°C . At temperatures below -20°C , the material will become brittle and may not be processed any further.

The screw-on cable tray systems are not designed for any other purpose than the one described here. If the screw-on cable tray systems are used for another purpose, any liability, warranty or damage claims shall be rendered null and void.

3 Safety

3.1 General safety information

Observe the following general safety information:

- Only have electrical work carried out by specialist personnel with electrical training.
- Risk of cutting from plate edges. Wear protective gloves.
- Design the screw-on cable tray systems according to the loads to be expected.

3.2 Personal protective equipment

List of personal protective equipment to be used:

Use hand protection

Wear eye protection

4 Necessary tools

List of tools to be used:

- Angle grinder
- Drill/battery-operated screwdriver
- Torque spanner
- Screwdriver
- Hammer

5 System overview

5.1 System description

The screw-on cable trays for routing cables are designed for high support loads. The widths vary from 100 to 600 mm and the side heights from 35 to 110 mm. The cable trays are screwed together using connector holes with the appropriate fastening material. The selection of the matching cable tray system is dependent on the area of use and the cable load and volume to be routed.

The following screw-on cable tray systems are available with hot galvanised (FS) and hot-dip galvanised (FT) and stainless steel (A2/A4) stainless steel surfaces:

- MKS medium-duty cable tray system
- SKS heavy-duty cable tray system
- DKS perforated cable tray system
- EKS extra-heavy cable tray system
- IKS industrial cable tray system

The screw-on cable trays are available in perforated (MKS, SKS, DKS, EKS, IKS) and unperforated (MKSU, SKSU, EKSU) versions. The systems include numerous connectors, fittings – such as bends, add-on tees, T and reducers, cross-overs and covers – and further accessories.

The cable tray systems can be mounted on floors, walls and ceilings on various support systems. The mounting of the support systems is described in separate mounting instructions, see „1.6 Applicable documents“ on page 6.

5.1.1 Cable trays

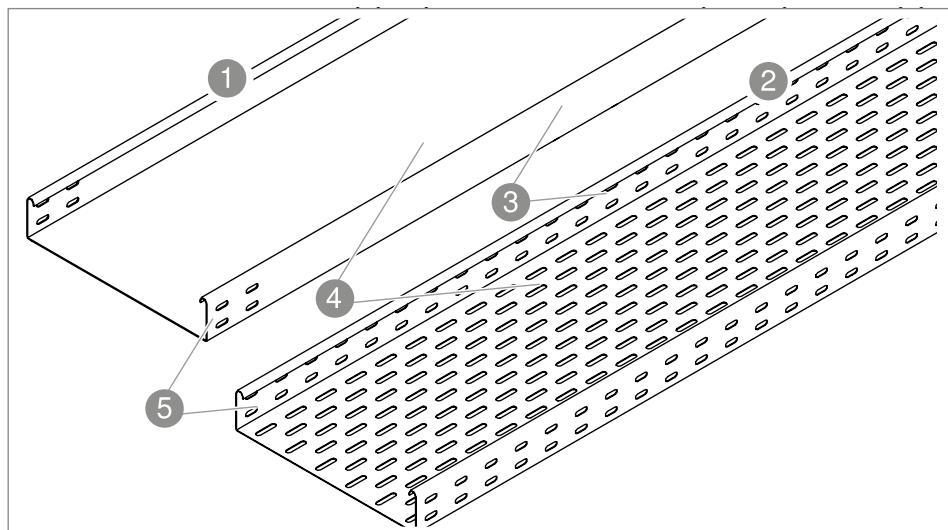

Fig. 1: Unperforated and perforated tray

① 1 Unperforated cable tray (MKSU, SKSU, EKSU)

- ② 1 Perforated cable tray (MKS, SKS, DKS, EKS, IKS)
- ③ 1 Cable tray rail with rounded rail edge
- ④ 1 Cable tray base
- ⑤ 1 Connector perforation

5.2 Connectors

The following parts can be interconnected using connectors:

- Cable tray with cable tray
- Cable tray with fitting

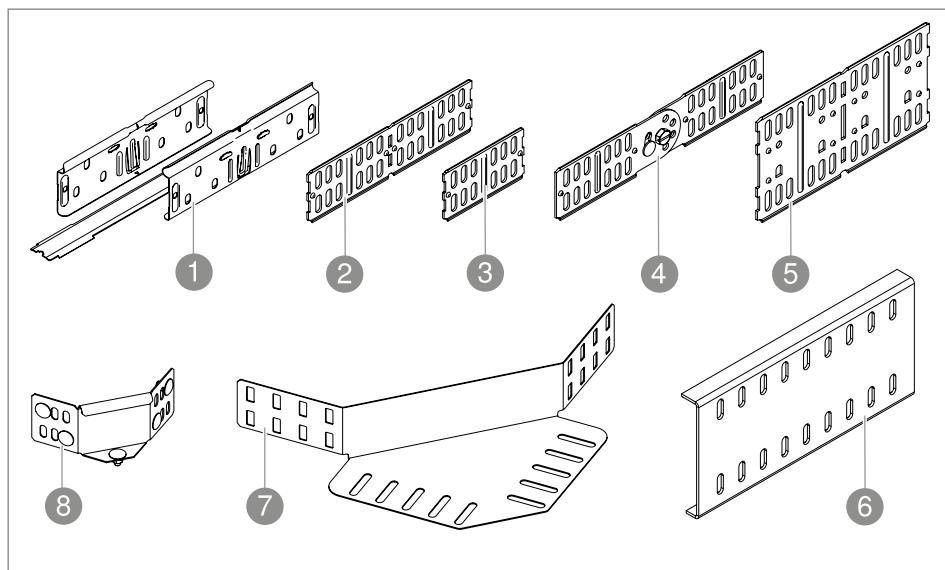

Fig. 2: Connector

No.	Designation	Function	Application
①	RV straight connector set with joint plate for MKS/SKS	Screwless straight connection	Cable tray height 35 and 60 mm
②	RWVL straight and angle connector	Screwed straight connection and horizontal change of direction	Cable tray height 35 and 60 mm
③	RLVK straight connector	Screwed straight connection and horizontal change of direction	Cable tray height 35 and 60 mm
④	RGV adjustable connector	Vertical change of direction, screwed	All cable tray heights
⑤	RLVL straight connector	Screwed-on straight connection	Cable tray height 85 and 110 mm
⑥	RLVA outside straight connector	Screwed-on straight connection	SKSU height 110 mm, length 6000 mm
⑦	REV corner connector	Creation of 90° bend for cables with large bend radius, screwed-on	All cable tray heights
⑧	WKV angle connector	Creation of 90° bend or corner, screwed-on	Cable tray height 35 and 60 mm

Tab. 1: Overview of connectors

5.2.1 Fittings

The fittings can be used for cable trays of widths of 100 to 600 mm and the heights 35, 60, 85 and 110 mm. The fittings can fastened to the cable tray rail either with double clamps of type DOP A2 or with truss-head bolts of type FRS and combination nuts. The exceptions to this are vertical bends, adjustable bend elements and fittings with a side height of 35 mm. These fittings can only be screwed on. All fittings have integrated joint plates with additional beading to protect the cables. The joint plates can also be screwed to the tray with FRS truss-head bolts and combination nuts.

No.	Designation	Function	Application
1	Vertical bend, rising Radius 180 mm	Creation of 90° bend, vertical	100–600 mm tray width
2	Vertical bend, falling Radius 120 mm	Creation of 90° bend, vertical	100–600 mm tray width
3	Connector perforation	Fastening material retainer	100–600 mm tray width

Tab. 2: Overview of vertical bends

Adjustable bend element, vertical**Fig. 10:** Adjustable bend elements for height offset

No.	Designation	Function	Application
①	Adjustable bend element	Height offset compensation Creation of vertical bends with flexible radii	100–600 mm tray width
②	Half adjustable connectors	Connection of adjustable bend element with cable tray	100–600 mm tray width
③	Curved slot	Variable angle adjustment	
④	SKS M securing screw	Angle fixing	
⑤	SKS hinge screw M8x 16	Fastening of adjustable bend element	

Tab. 3: Overview of vertical bends

5.2.2 Cover for cable trays

Covers for cable trays are available without fastening material or with pre-mounted turn buckles.

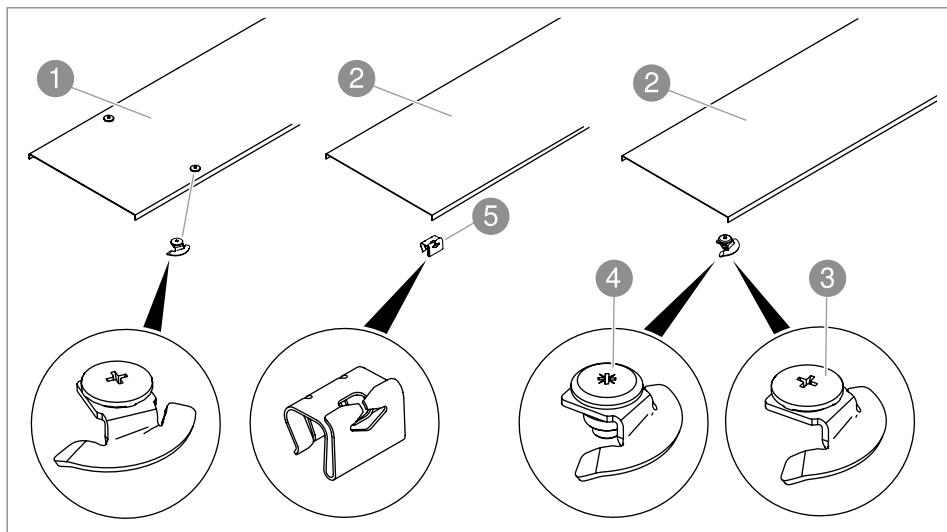

Fig. 11: Covers with fastening material for cable trays

No.	Designation	Function	Application
1	Cover with pre-mounted turn buckles	Protection against weathering and dirt	100–600 mm tray width
2	Cover, unperforated	Protection against weathering and dirt	100–600 mm tray width
3	DRL H turn buckle	Cover fastening, mounting on the cover with rivets	Perforated and unperforated covers
4	DRL H S turn buckle	Cover fastening, mounting on the cover with screws	Perforated and unperforated covers
5	DK DRLU cover clamp	Cover fastening, mounting on the cover with clamps	Perforated and unperforated covers

Tab. 4: Overview of covers and fastening material

5.2.3 Cover for fittings

Covers are available for 45° and 90° bends, angle-adjustable bends, T pieces, add-on tees and cross-overs. Depending on the version, the fitting cover is mounted on the cable tray with turn buckles pre-mounted at the factory and is additionally held by the support of the path cover or held exclusively by the path cover.

45° and 90° bend cover

One pre-mounted turn buckle each.

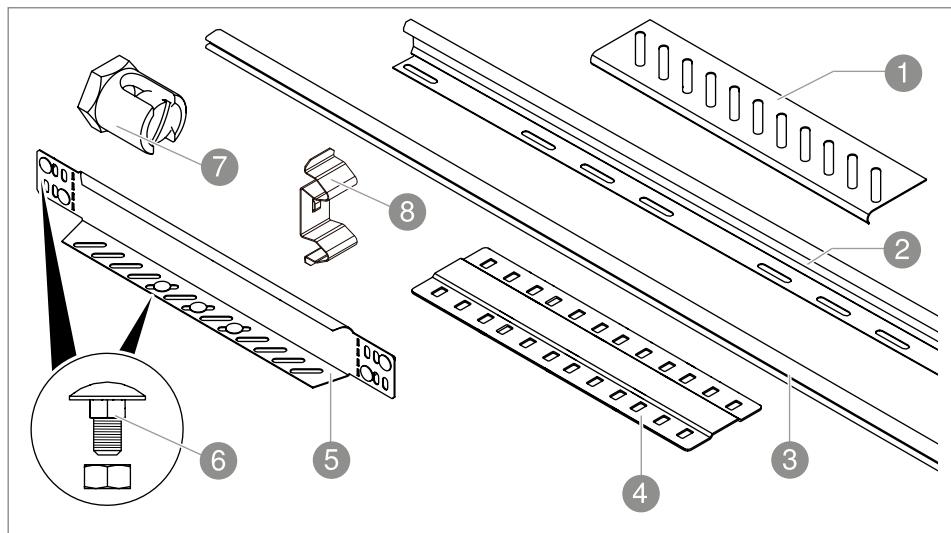

Fig. 17: Accessories

No.	Designation	Function	Application
①	Bottom end plate	Creation of cable exit	All tray types
②	TSG barrier strip	Separation of cables of different voltages or functions	All tray types
③	Edge protection strip	Cover of cut cable tray edges, protection against cable damage	All tray types
④	Joint plate	Connection of cable tray bases at the joint	All tray types
⑤	Reducer profile/end closure	Cable tray width reduction/end of cable tray	All tray types
⑥	Truss-head bolt FRS	Fastening of fitting to cable tray	All tray types
⑦	Earthing terminal	Creation of equipotential bonding	All tray types
⑧	Double clamp	Fastening of fitting to cable tray	All tray types, except side height 35 mm

Tab. 5: Overview of accessories

6 Installation

The mounting of the support systems for the cable tray systems takes place according to the local circumstances and the planned loads. The mounting of the different support systems is shown in special mounting instructions, see „1.6 Applicable documents“ on page 6.

The mounting drawings of the screw-on cable tray systems show either perforated or unperforated cable trays. All the connectors, fittings and accessories shown can be mounted on both perforated and unperforated cable trays. If unperforated cable trays are cut, then the connector perforation must be re-drilled.

When mounting the FRS truss-head bolts and SKS hinge screws made of steel or stainless steel from OBO Bettermann, the following tightening torque must be applied:

Thread	Tightness class 5.6	Tightness class 8.8
M6	4.80 Nm	11.30 Nm
M8	11.60 Nm	27.30 Nm

Tab. 6: Torques for steel screws from OBO Bettermann

Thread	Resistance grade 70	Resistance grade 80
	Friction coefficient 0.14	Friction coefficient 0.14
M6	9.70 Nm	12.90 Nm
M8	23.60 Nm	31.50 Nm

Tab. 7: Torques for stainless steel screws from OBO Bettermann

6.1 Cutting the cable tray

Cut the cable trays according to the local circumstances.

CAUTION

Risk of cutting!

During cutting work, metal chips or sharp cut edges can cause injuries to eyes and hands!

- Wear protective glasses and gloves.
- Deburr cut edges.

1. Cut cable trays to the desired length, e.g. using an angle grinder.
2. Deburr cut edges.

Note!

If cable trays are cut, the corrosion protection at the cut edges must be renewed with zinc spray, e.g. type ZSF zinc touch-up spray, item no. 2362970 or type ZABF zinc touch-up paint, item no. 2362979.

6.2 Pre-drilling unperforated cut cable trays

If unperforated cable trays are cut, then appropriate drill holes must be drilled for the straight connections and for the mounting of fittings and joint bars.

The number of drill holes is dependent on the height and width of the cable trays. Recommendation: For side height 60 mm = 4 screws per connector; for width 300 mm = 3 screws per joint plate.

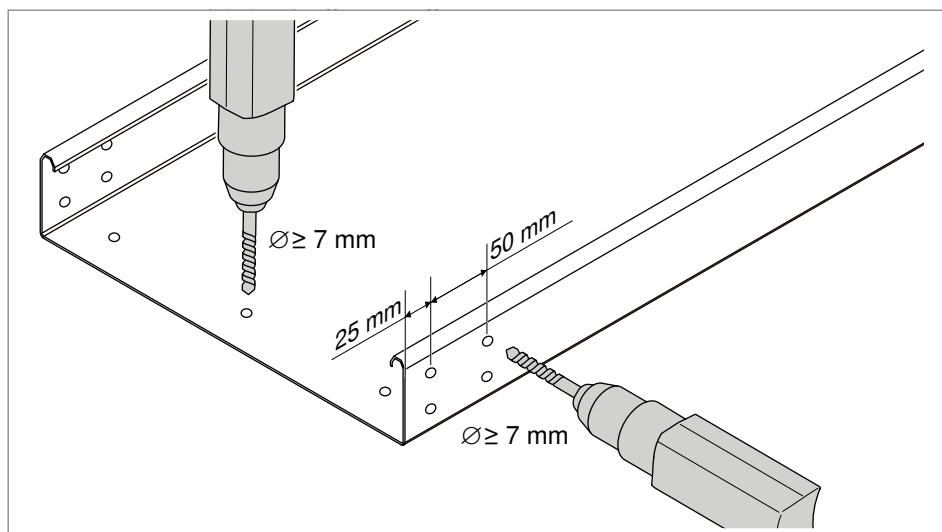

Fig. 18: Drilling a cut, unperforated tray

1. Drill the drill holes with $\varnothing \geq 7$ mm in the tray rail and tray base.

6.3 Mounting the joint plate

To avoid transverse bending at higher loads, a joint plate must be used for tray widths of 400 mm or more in the joint area of the cable trays that are to be connected. Up to a tray width of 300 mm, the mounting of the joint plate is optional. The joint plate is mounted after the connectors have been mounted. The joint plate is fastened with FRS M6 truss-head bolts and combination nuts.

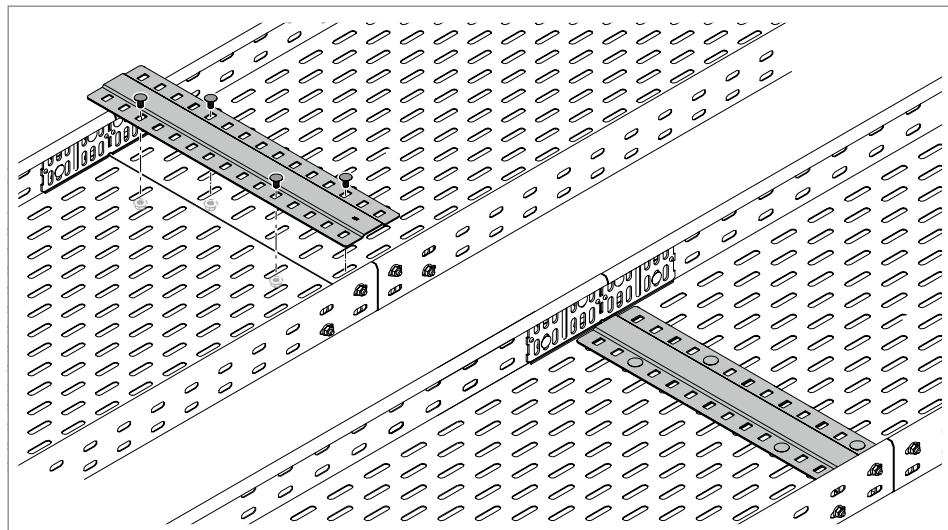

Fig. 19: Mounting the joint plate

1. Place the joint plate centrally on the joint area of the cable trays.
2. Screw on the joint plate.

6.4 Applying the edge protection strip

To avoid damage to cables, edge protection strip is attached at cut edges of cable trays, if no joint plates or bottom end plates are to be mounted.

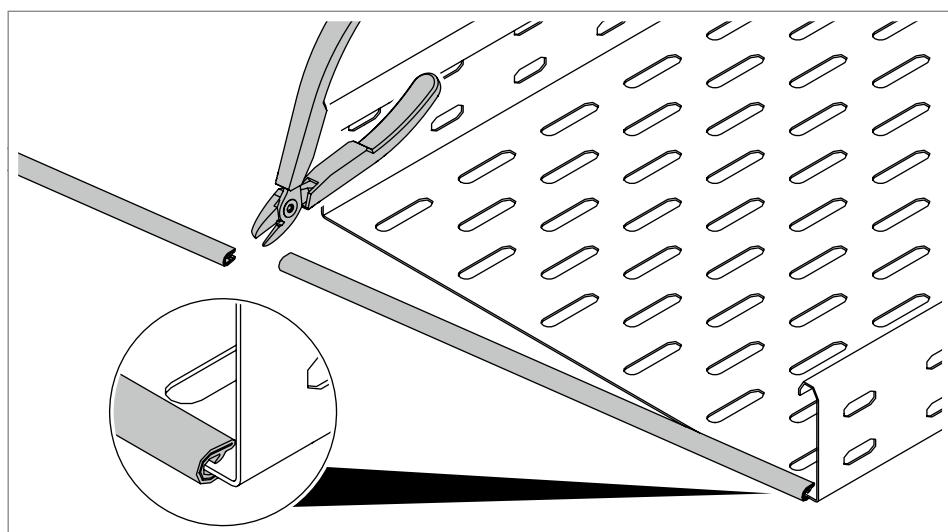

Fig. 20: Applying edge protection strip

1. Cut the edge protection strip to size.
2. Clamp the edge protection strip to the edge of the cable tray.

6.5 Connecting cable trays

Cable trays are connected in a straight or angled direction using various connectors. Straight connectors connect cable trays lengthwise. Angle connectors can be used to route trays horizontally at angles of different sizes or to create corners. Adjustable connectors create rises or drops.

ATTENTION

Risk of damage!

Screws can damage cables. Always pass fastening screws through the rail from the inner side of the cable tray and secure with combination nuts on the outer side of the cable tray.

6.5.1 Creating a straight connection

Screwless straight connection with RV straight connector set

The straight connector set contains two straight connectors and one joint plate and is mounted without screws.

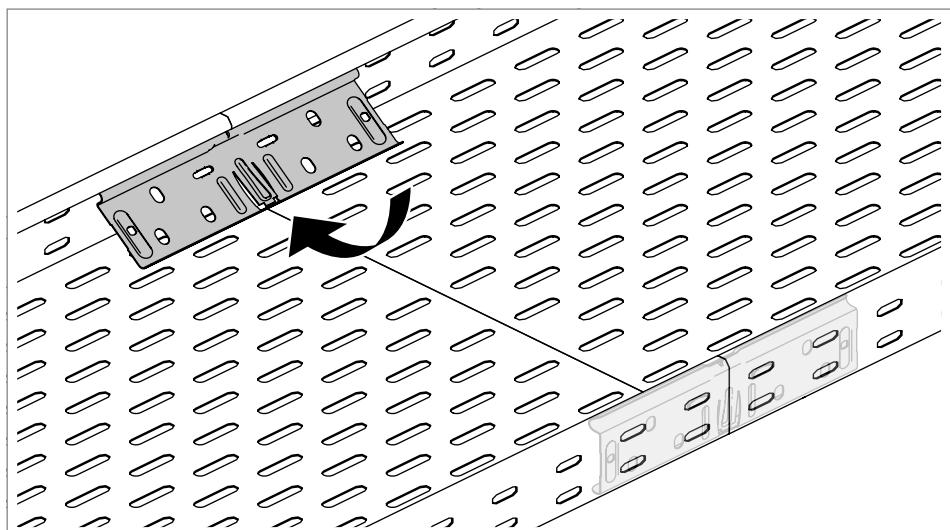

Fig. 21: Inserting the RV 607 straight connector

1. Insert the straight connectors on the inner side of the rail and press them in.

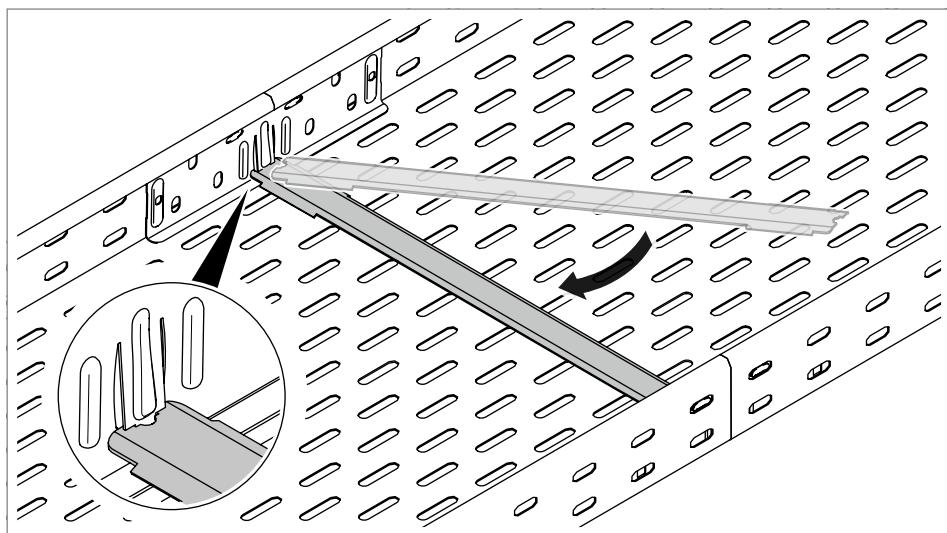

Fig. 22: Inserting the joint plate

2. Clamp the joint plate between the straight connectors.

Straight connection with RLVK straight connector

The RLVK straight connector is used with the cable tray heights 35 and 60 mm. The connector is fastened with FRS M6 truss-head bolts and combination nuts.

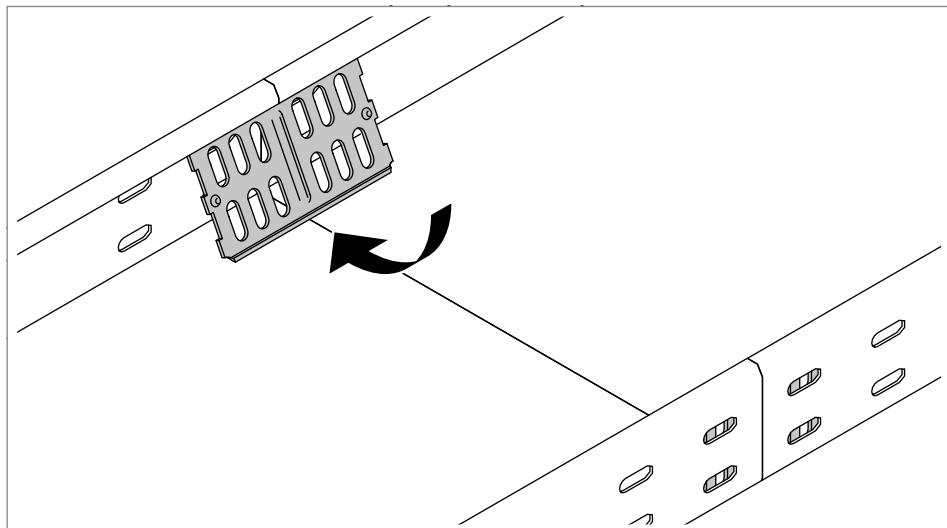

Fig. 23: Inserting the RLVK straight and angle connector

1. Insert the straight connector into the inside of the rail.

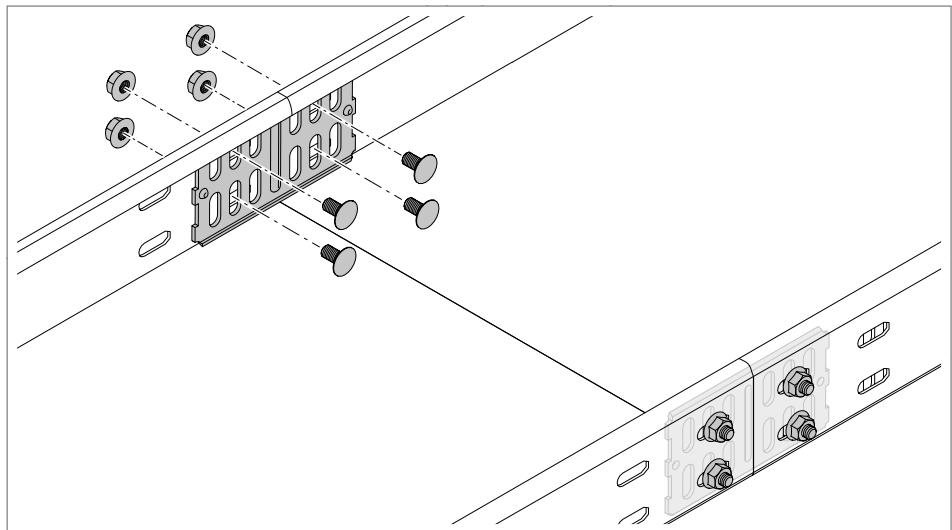

Fig. 24: Screwing on the RLVK straight and angle connector

2. Screw on the straight connector.

Straight connection with RLVL straight connector

The RLVL straight connector is used with the cable tray heights 85 and 110 mm. The connector is fastened with FRS M6 truss-head bolts and combination nuts.

To avoid transverse bending at higher loads, a joint plate must be used for tray widths of 400 mm or more. Up to a tray width of 300 mm, the mounting of the joint plate is optional.

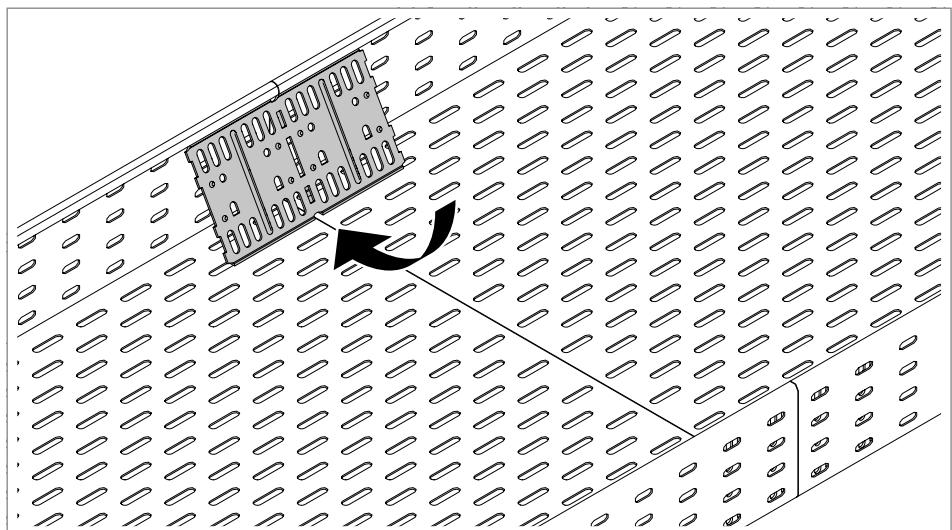

Fig. 25: Inserting the RLVL straight connector

1. Insert the straight connector into the inside of the rail.

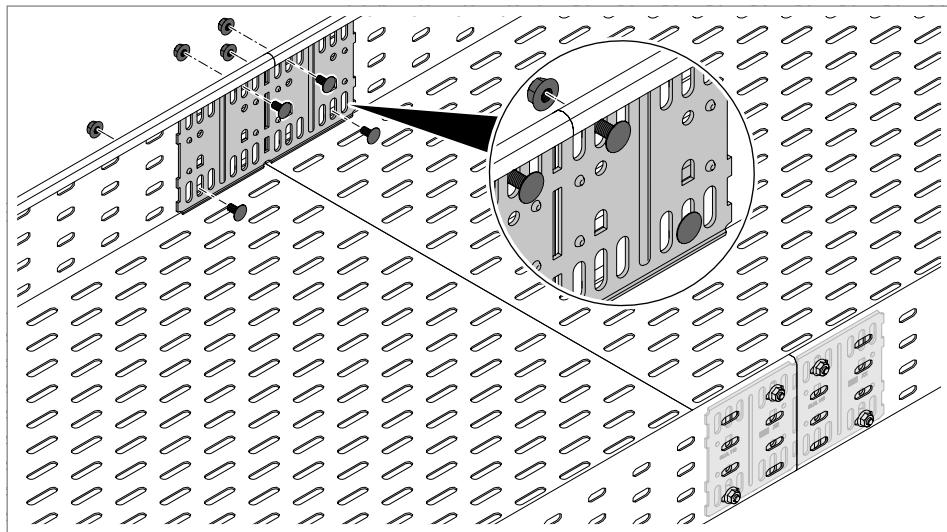

Fig. 26: Screwing on the RLVL straight connector

2. Screw on the straight connector.

Straight connection with RLVA outside straight connector

The RLVA 110 outside straight connector is used with the cable tray type SKSU 110 with a length of 6 m to enable support spacings > 4 m . The connector is screwed on with FRS M6 truss-head bolts and combination nuts.

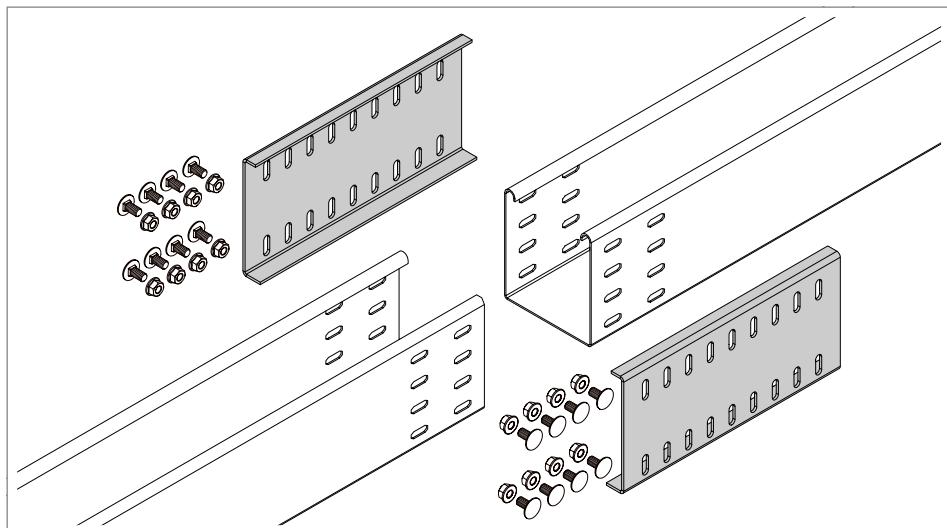

Fig. 27: Placing the RLVA straight connector on the outside

1. Place the straight connector on the outer side of the rail.

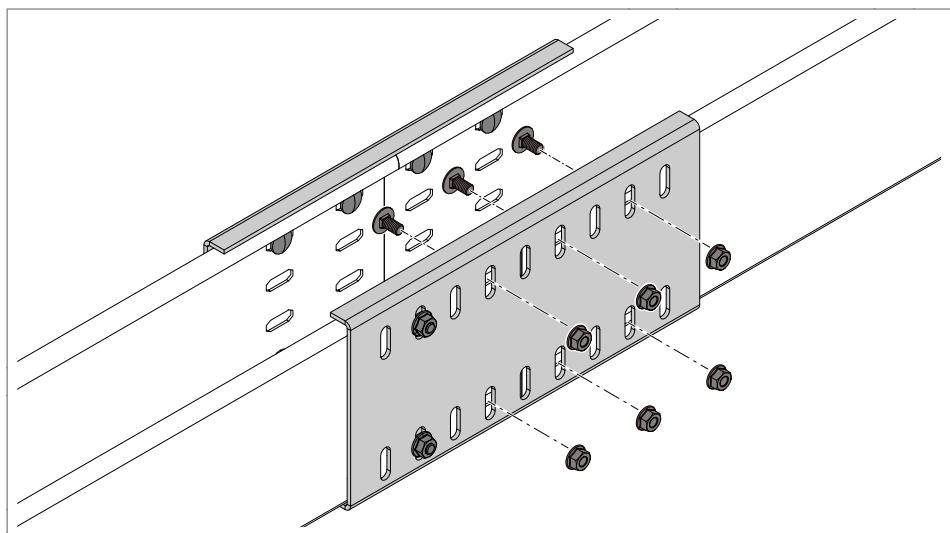

Fig. 28: Screwing on the RLVA straight connector

2. Screw on the straight connector.

Straight connection with RWVL straight and angle connector

The RWVL straight and angle connector is used with the cable tray heights 35 and 60 mm. The connector is screwed on with FRS M6 truss-head bolts and combination nuts.

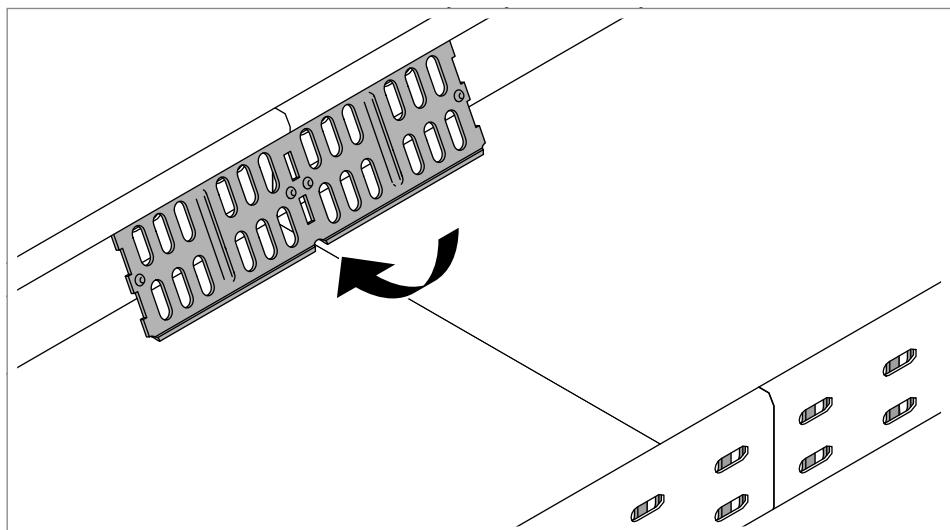

Fig. 29: Inserting the RWVL straight and angle connector

1. Insert the straight and angle connectors on the inner sides of the rail.

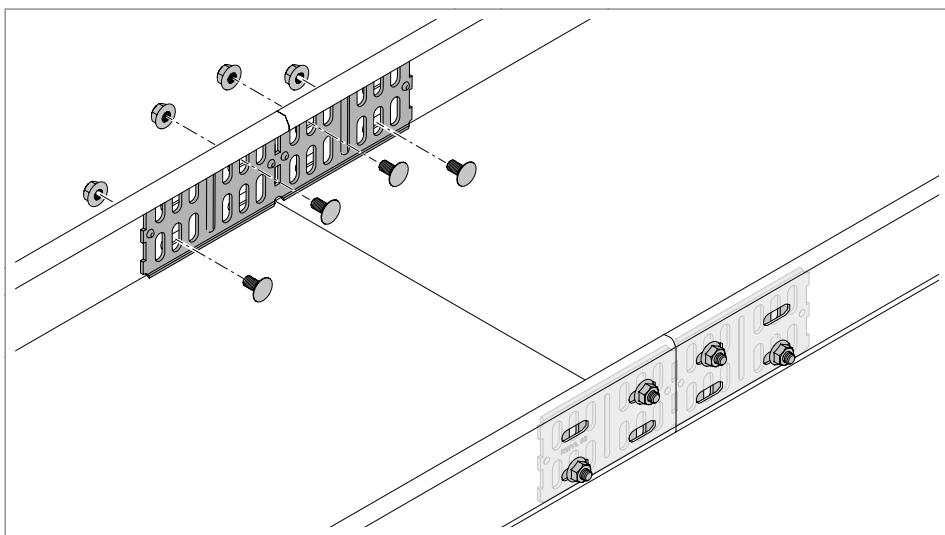

Fig. 30: Screwing on the RWVL straight and angle connector

2. Screw on the RWVL straight and angle connector.

6.5.2 Creating an angled connection

Angled connection with RWVL straight and angle connector

The RWVL straight and angle connector is used with the cable tray heights 35 and 60 mm. The connector is screwed on with FRS M6 truss-head bolts and combination nuts.

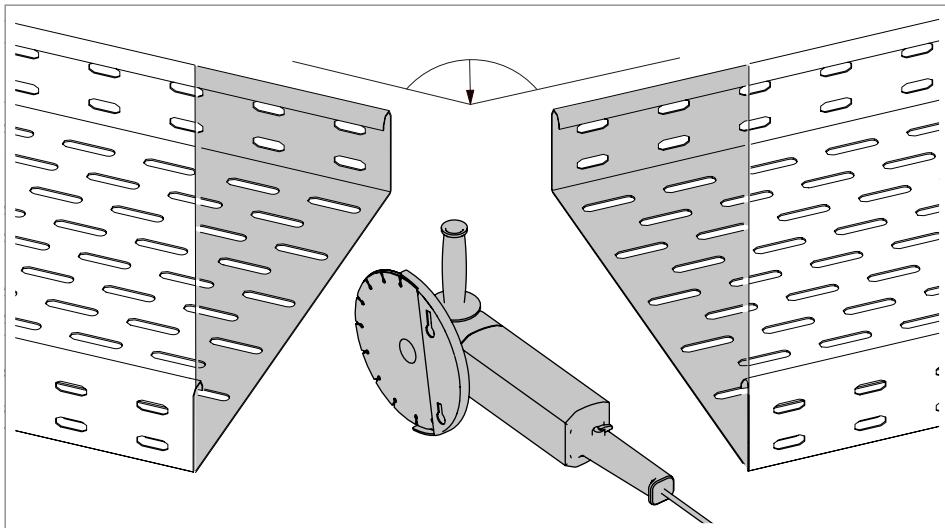

Fig. 31: Cutting the cable trays to create angles

1. Measure the angle and draw it onto the cable trays accordingly.
2. Cut the cable trays with an angle grinder.

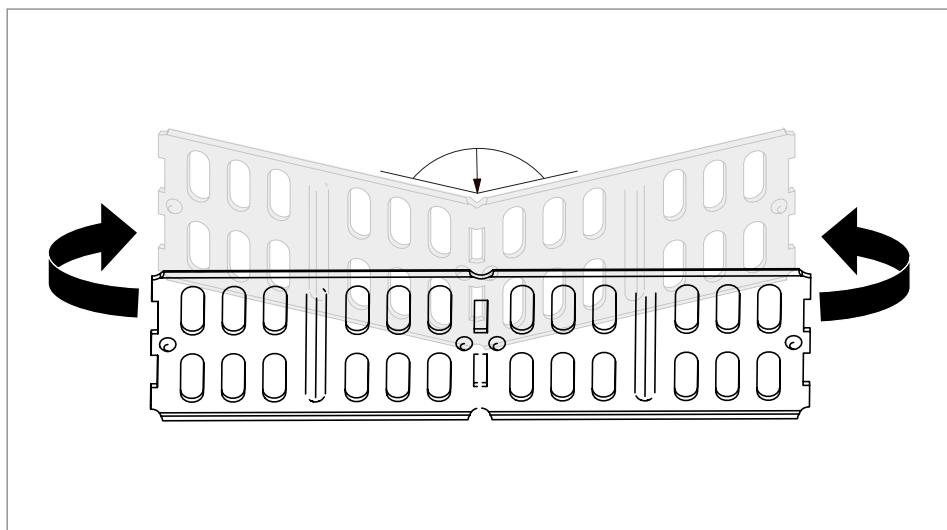

Fig. 32: Bending the RWVL straight and angle connector

3. Bend the straight and angle connector into the desired angle.

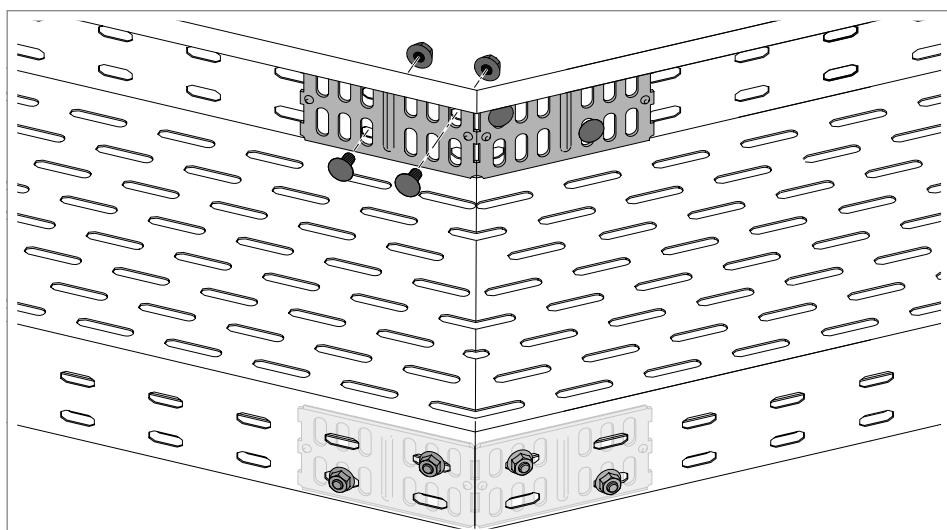

Fig. 33: Screwing on the RWVL straight and angle connector

4. Insert the straight and angle connector on the inner sides of the rail.
5. Screw on the straight and angle connector.

T branch with WKV angle connector

The WKV angle connector is mounted to create a tee with rounded corners. The WKV angle connector is used with the cable tray heights 35 and 60 mm. The connector is screwed on with FRS M6 truss-head bolts and combination nuts.

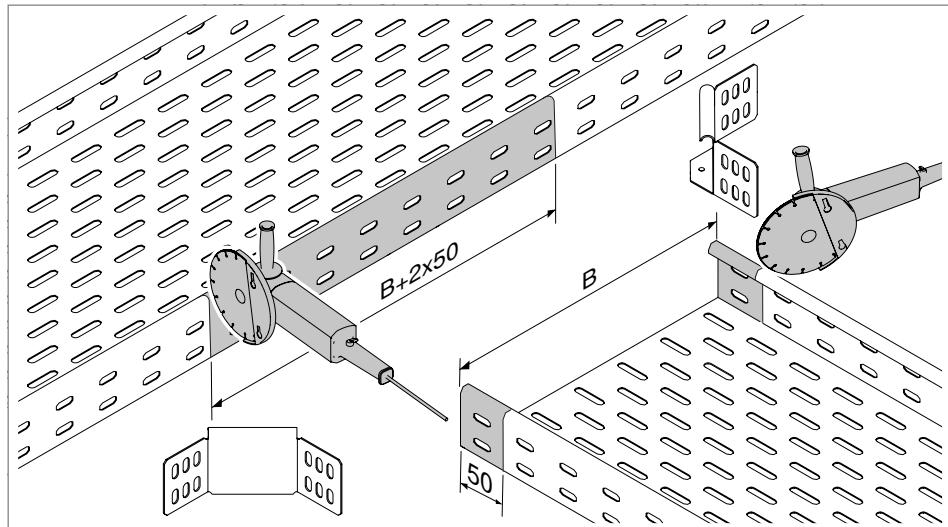

Fig. 34: Notching out the cable tray rails for the WKV angle connector

1. Notch out the cable tray rail with the dimension = $W + 2 \times 50$ mm.
2. Notch out the second cable tray rail on both sides by 50 mm.

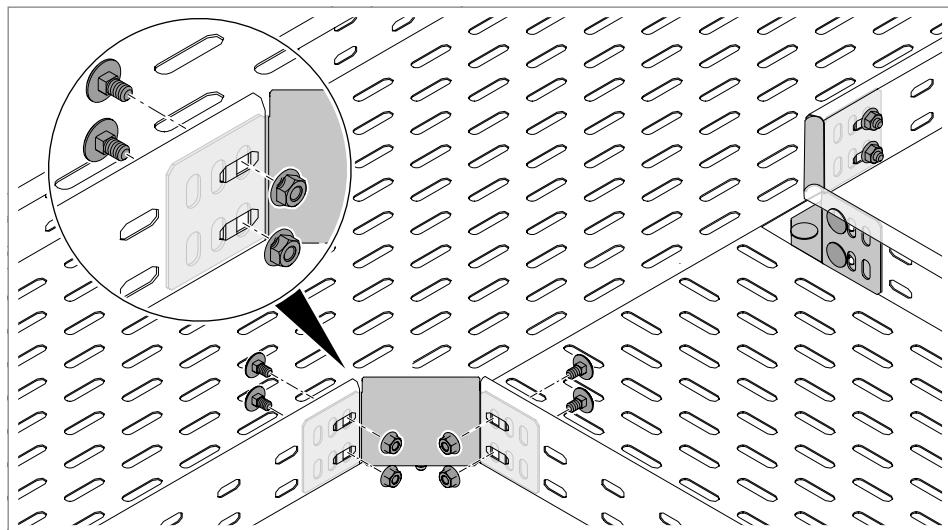

Fig. 35: Mounting the WKV angle connector

3. Insert the straps of the angle connector in the inner sides of the rail.
4. Screw on the angle connector.

90° internal corner with REV corner connector

The REV corner connector is mounted to create 90° internal corners with a large radius, allowing the maintenance of the minimum cable bend radii. The REV corner connector is used with the cable tray heights 35, 60 and 110 mm. The connector is screwed on with FRS M6 truss-head bolts and combination nuts.

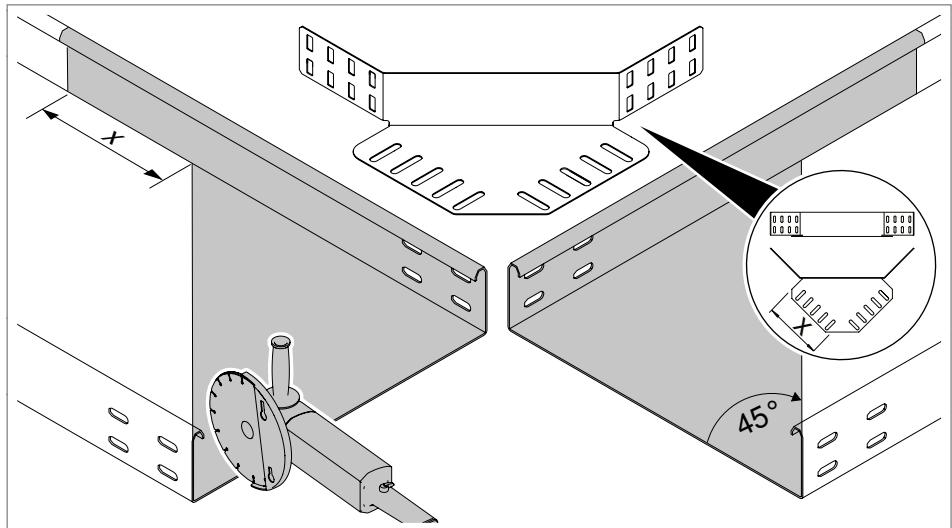

Fig. 36: Cutting cable trays for the REV corner connector

1. Cut the cable trays at a 45° angle and notch out the cable tray rails with the dimension $x = 100$ mm.

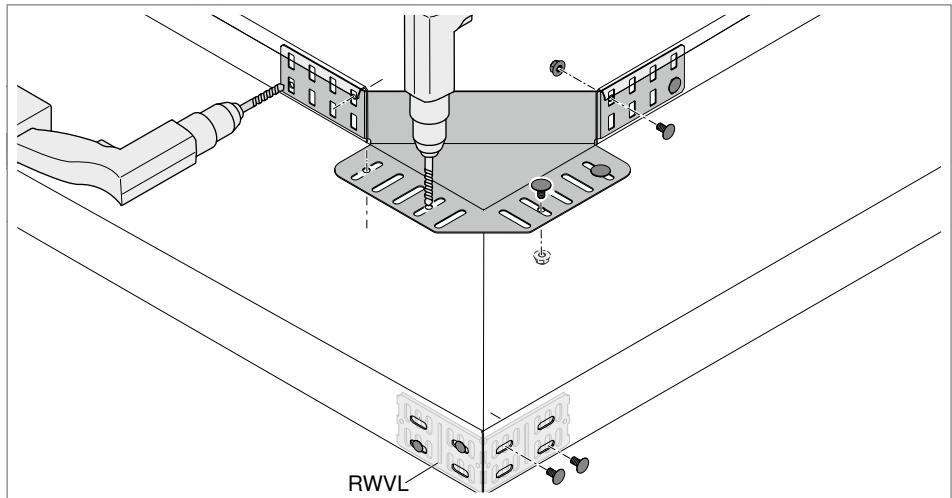

Fig. 37: Mounting the REV corner connector

2. Insert the straps of the corner connector in the inner sides of the rail.
3. Pre-drill the cable tray.
4. Screw on the corner connector.
5. Insert an RWVL straight and angle connector in the external corner on the inner sides of the rail.
6. Screw on the RWVL straight and angle connector.

6.5.3 Creating a vertical connection

The RGV adjustable connector is mounted to create vertical connections of angles of up to 90° for rising or falling sections. The RGV adjustable connector is used with all cable tray heights. In addition, bottom end plates are mounted to avoid cable damage due to sharp edges. Connectors and bottom end plates are screwed on with FRS M6 truss-head bolts and combination nuts.

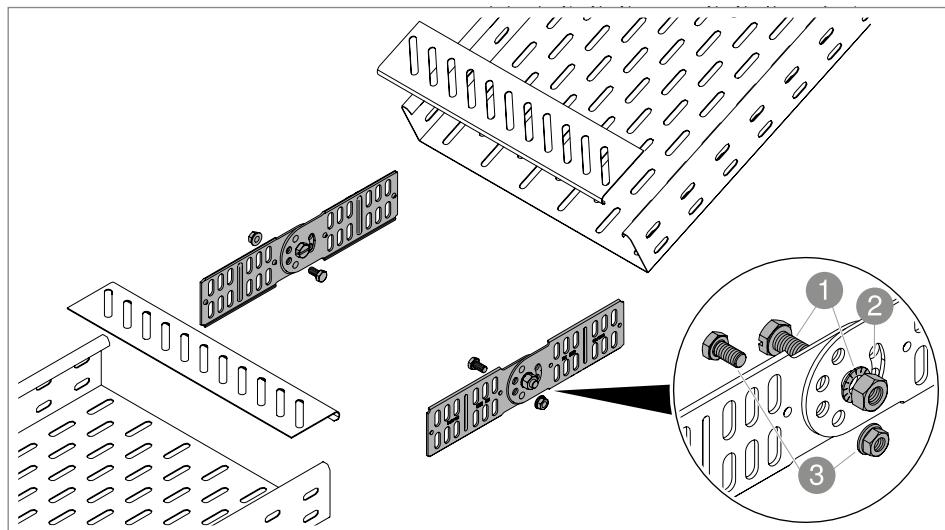

Fig. 38: RGV adjustable connector and bottom end plates

- ① 1SKS hinge screw M8x16 mm
- ② 1Long slot
- ③ 1SKS M6 securing screw

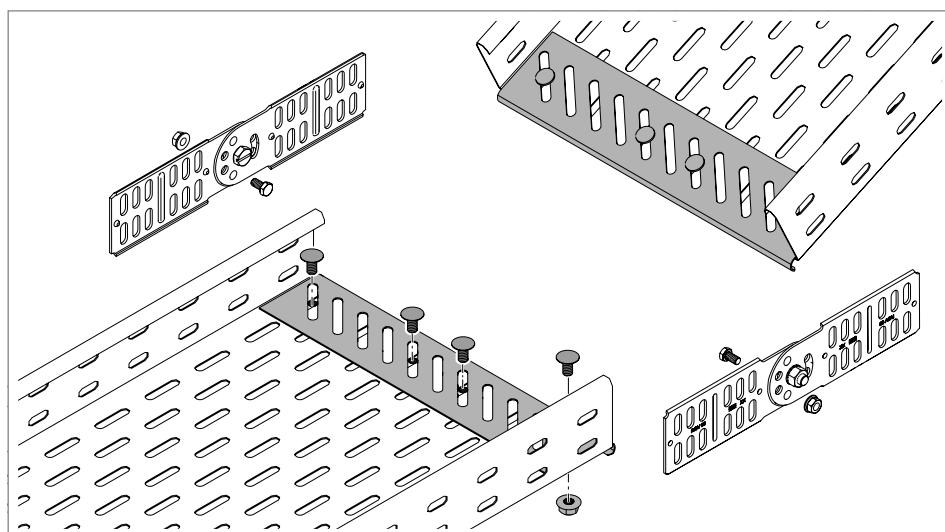

Fig. 39: Screwing on the bottom end plates

1. Pre-drill unperforated cable trays for the mounting of the bottom end plates.
2. Screw the bottom end plates to the ends of the cable trays.

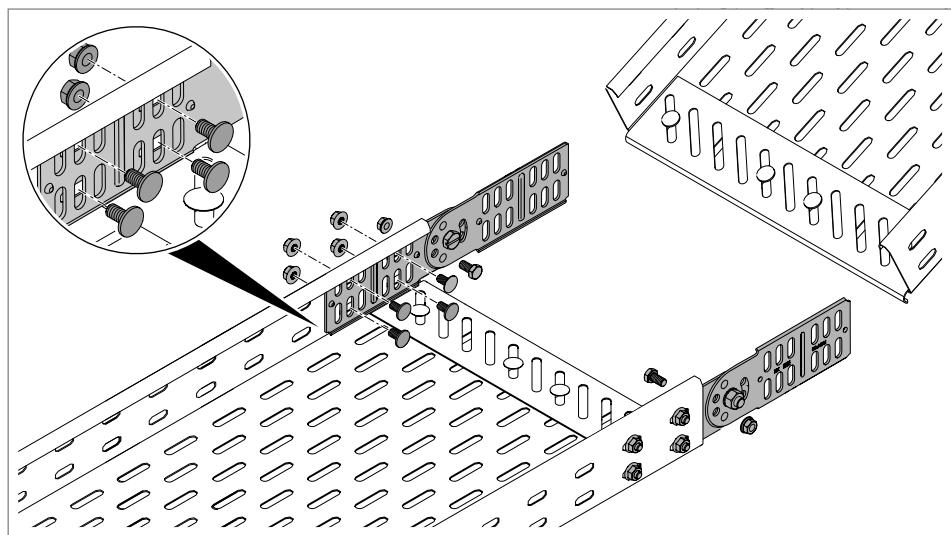

Fig. 40: Screwing the RGV adjustable connector onto the cable tray

3. Insert the adjustable connector in the inner sides of the rail.
4. Screw on the adjustable connectors.

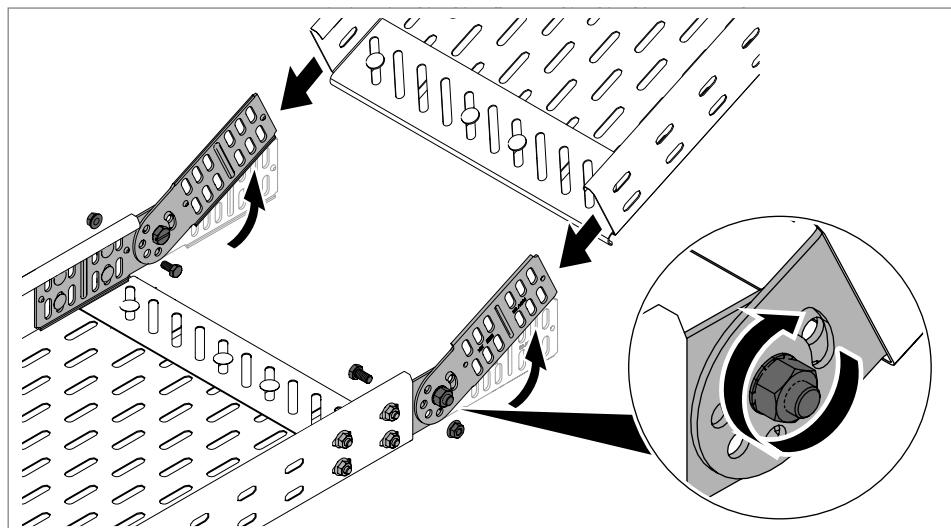

Fig. 41: Tightening the hinge screw

5. Adjust the angle on the adjustable connectors and fix with a hinge screw.
6. Push the second cable tray onto the adjustable connector.

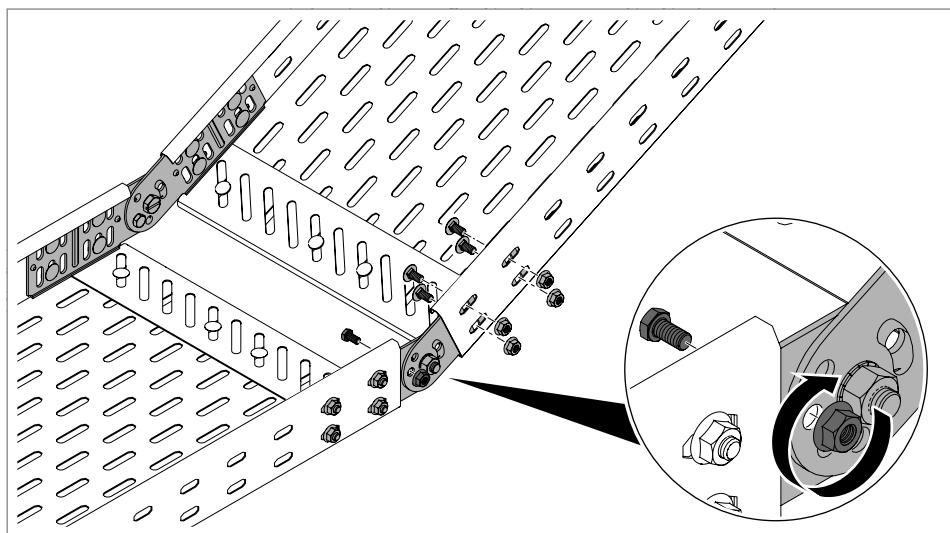

Fig. 42: Tightening the locking screw

7. Screw on the adjustable connectors.
8. Screw on the locking screw in the slot or other available drill hole.

6.6 Mounting fittings

Vertical and horizontal changes of direction are created with fittings.

6.6.1 Supporting fittings

Fittings must always be supported by the support system. The mounting of the different support systems is shown in separate mounting instructions, see „1.6 Applicable documents“ on page 6.

WARNING

Risk of the support system falling!

If fittings are not supported, cable loads can become too heavy, destabilising the entire support system. There is a risk of the support system falling. Depending on their width, support the fittings with an additional support element.

Support of fitting up to 300 mm width

At a width of up to 300 mm, one cable tray support at a spacing of 250–300 mm from the edge of the fitting is sufficient.

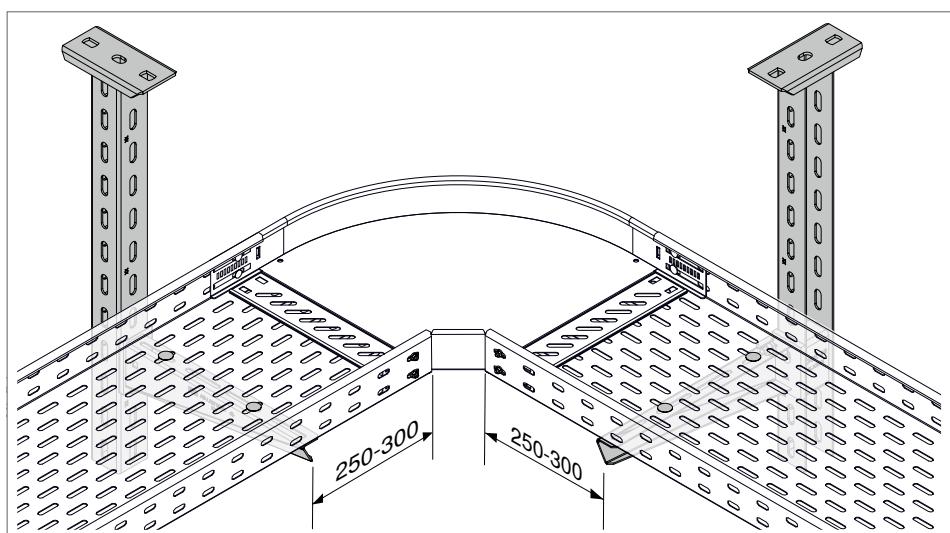

Fig. 43: Example of support for 90° bend fitting, 300 mm width

Support the fitting with a support structure at a distance of 250–300 mm from the edge.

Support of fitting \geq 400 mm width

At a width of 400 mm or more, one cable tray support is mounted at a spacing of 250–300 mm from the edge of the fitting. At a width of 400 mm, a support element must additionally be mounted under the fitting when the system is fully assigned. With fittings of a width of > 400 mm, an additional support element must always be mounted under the fitting.

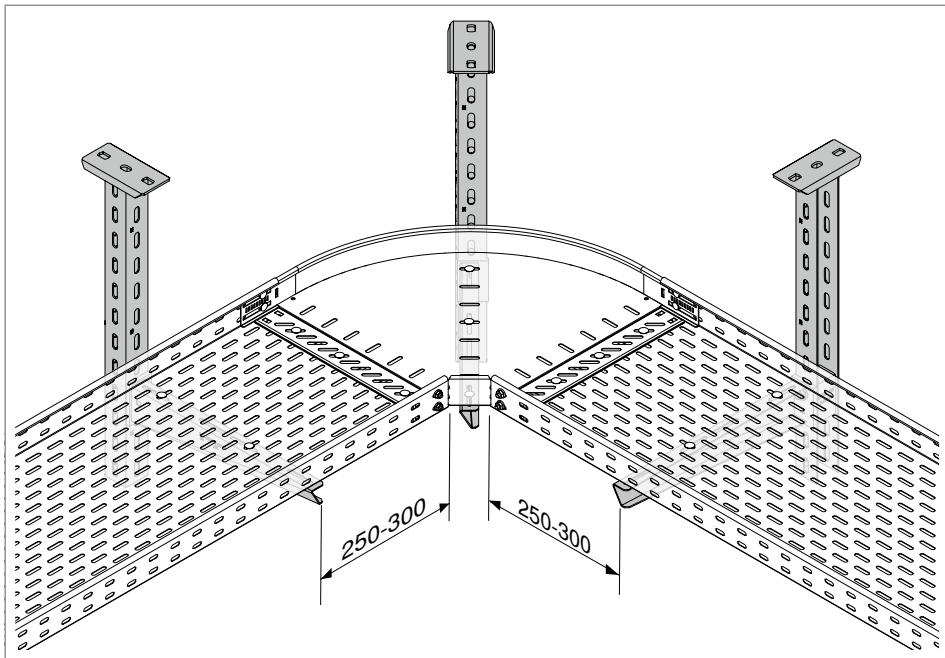

Fig. 44: Example of support for 90° bend fitting, 400 mm width

1. Support the fitting with a support structure at a distance of 250–300 mm from the edge.
2. Mount an additional support element under the fitting.

6.6.2 Mounting fitting on T piece, as example

To create branches or angles for horizontally laid cables, fittings such as 45° bends, 90° bends, angle-adjustable bends, T pieces, cross-overs and add-on tees are mounted. The fittings are available in widths of 100–600 mm.

The fittings are fastened to the cable tray rail either without tools with double clamps (from tray height 60 mm) or with truss-head bolts and combination nuts. Both mounting types are possible on uncut, perforated and unperforated trays, as well as with cut, perforated trays. With unperforated, cut trays, a connection perforation must be drilled in the rail and the fittings screwed on.

This chapter shows fitting mounting for 45° and 90° bends, T pieces and cross-overs, using the example of the T piece. The mounting of the add-on tee is described in chapter „6.6.3 Mounting an add-on tee as a branch“ on page 38 and the mounting of the angle-adjustable bend is described in chapter „6.6.5 Mounting the adjustable bend“ on page 41.

Note!

A list of the recommended number of screws or double clamps for the mounting of the different fittings can be found in chapter „10.2 Amount of fastening material“ on page 84.

Fastening/clamping a fitting with double clamp

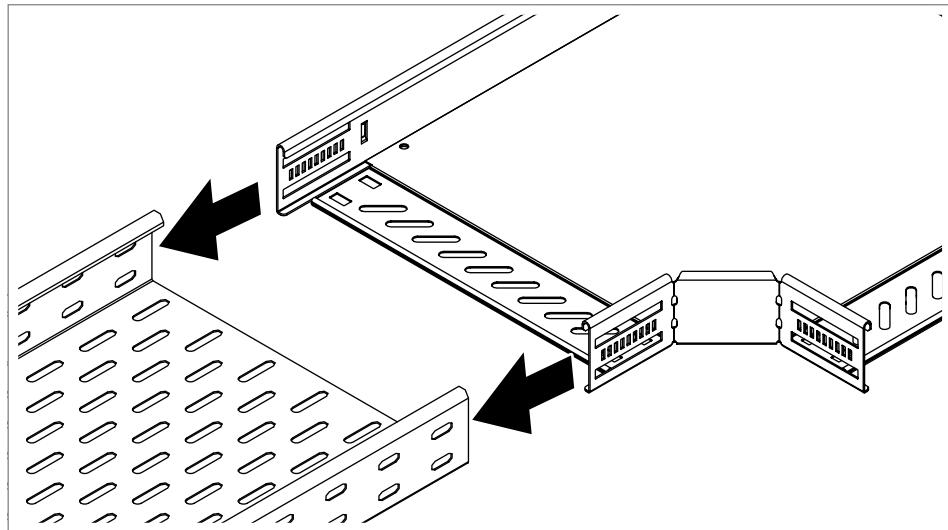

Fig. 45: Inserting a fitting

1. Push the connection straps of the fitting into the cable tray.

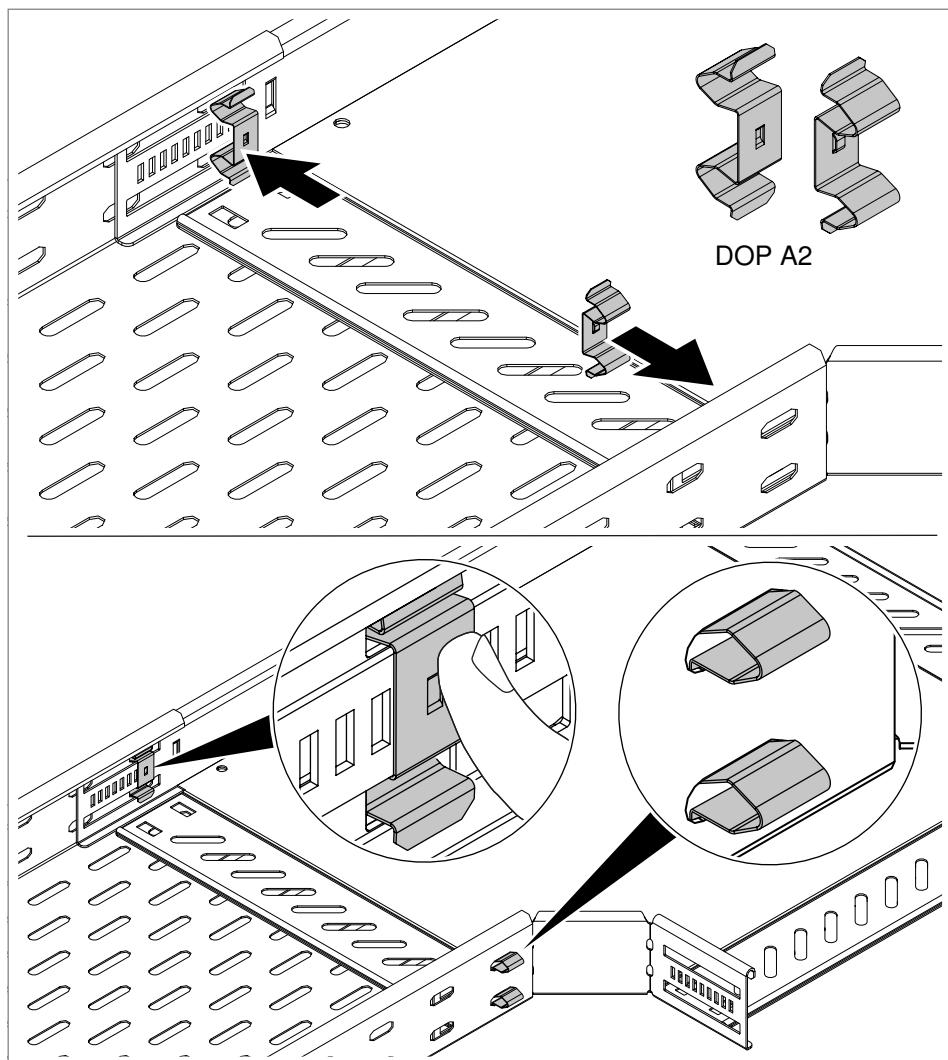

Fig. 46: Inserting the double clamp

2. Press the spring of the double clamp from the inside of the rail

through the connector perforation of the fitting and the cable tray.

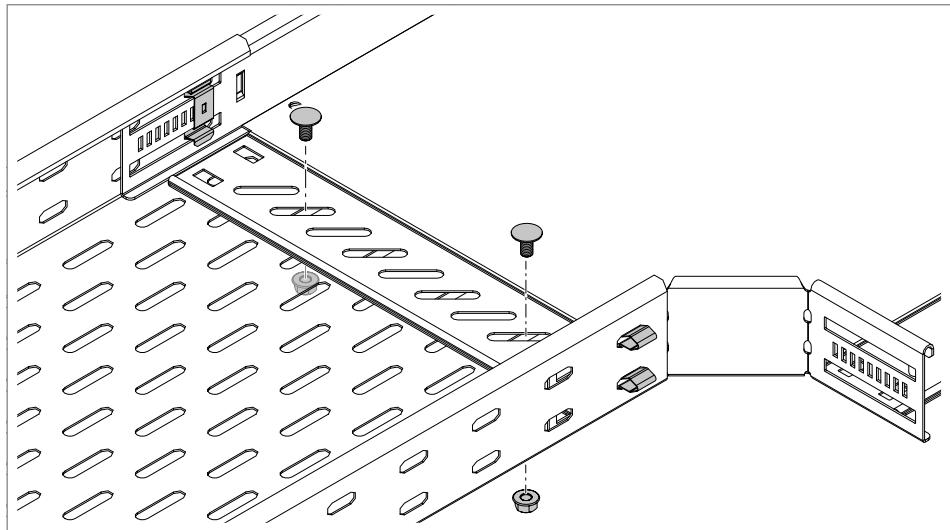

Fig. 47: Screwing on the joint plate

3. Screw on the joint plate with truss-head bolts and combination nuts.
4. Repeat steps 1 to 3 on the rest of the joints.

Note!

During the course of the instructions, the graphics illustrating the fittings only show the screw connection, even if a clamping connection is possible.

Fastening/screwing on a fitting with bolts

Fastening a fitting with bolts and combination nuts on a cut tray. The number of recommended screws is dependent on the width and height of the cable trays.

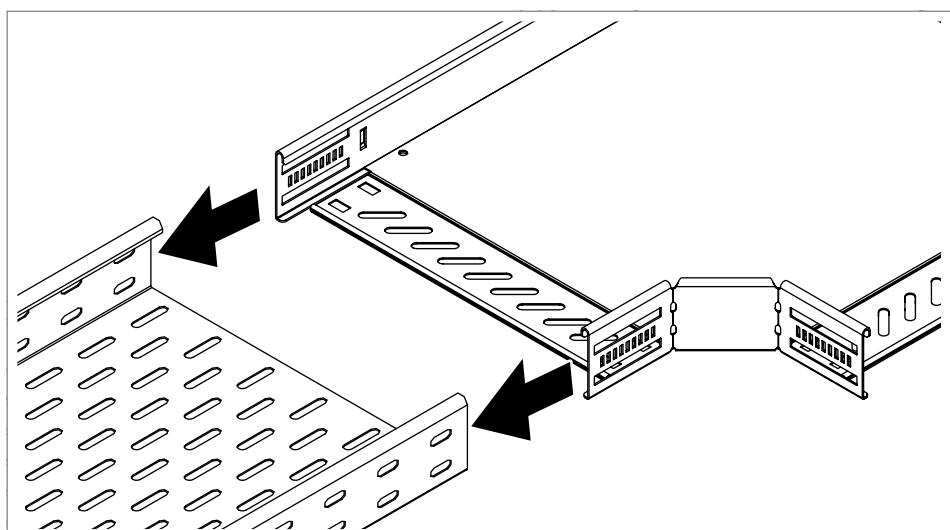

Fig. 48: Inserting a fitting

1. Push the connection straps of the fitting into the uncut ① or cut ② cable tray.

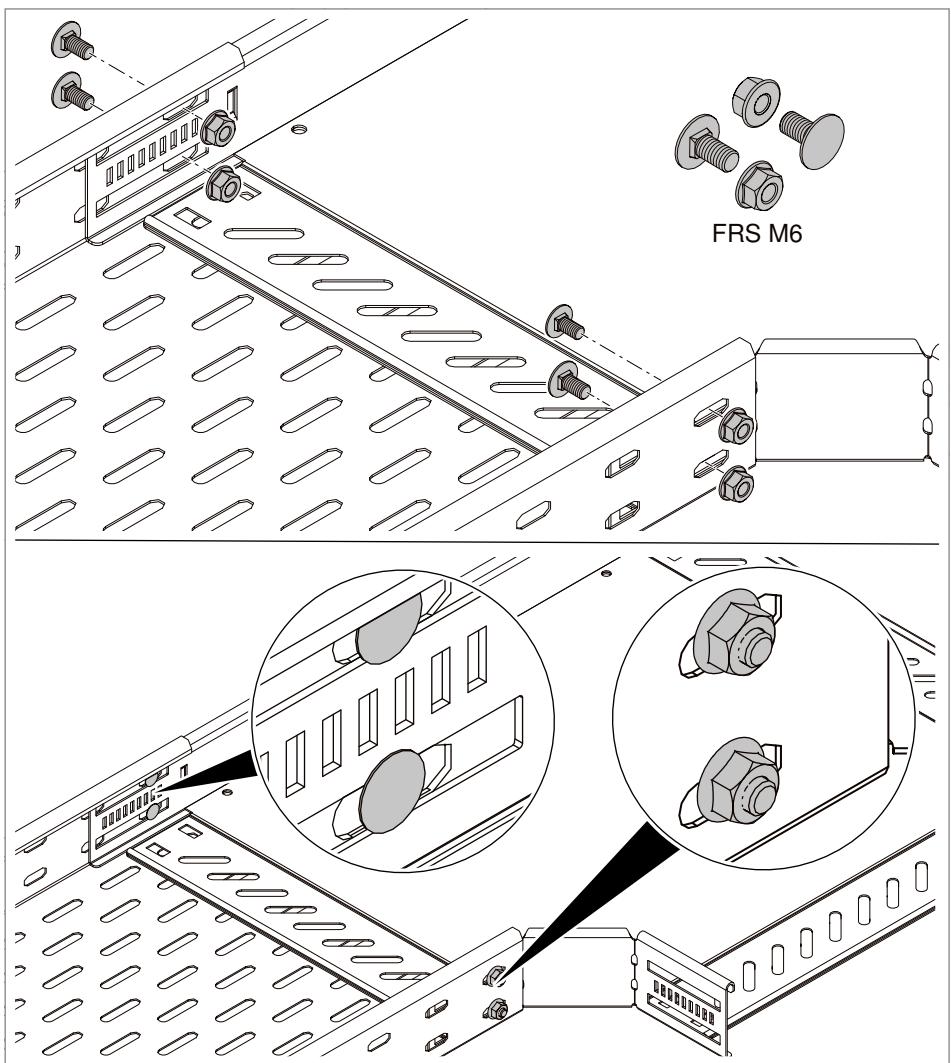

Fig. 49: Screwing on a fitting

2. Insert the truss-head bolts from the inside of the rail through the connector perforation of the fitting and the cable tray.
3. Lock the truss-head bolt with combination nuts.

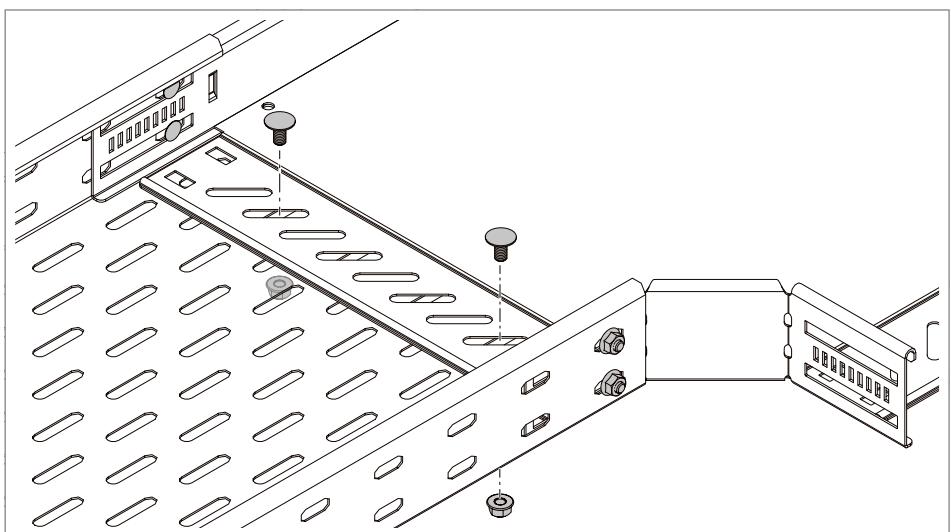

Fig. 50: Screwing on the joint plate

4. Screw on the joint plate with truss-head bolts and combination nuts.
5. Repeat steps 1 to 3 on the rest of the joints.

6.6.3 Mounting an add-on tee as a branch

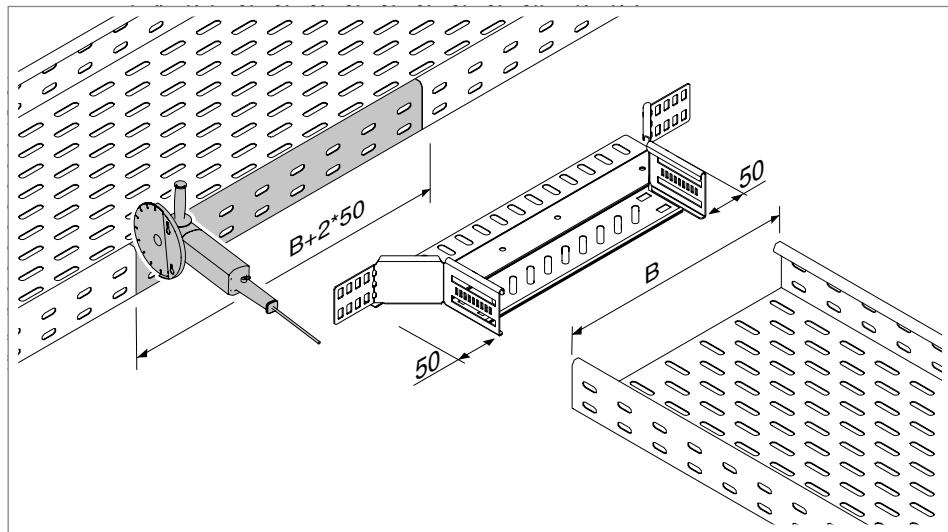

Fig. 51: Notching out a cable tray rail

1. Notch out the cable tray rail with the dimension = $W + 2 \times 50$ mm.
2. For unperforated cable trays, pre-drill the connector perforation for the add-on tee and joint plate.

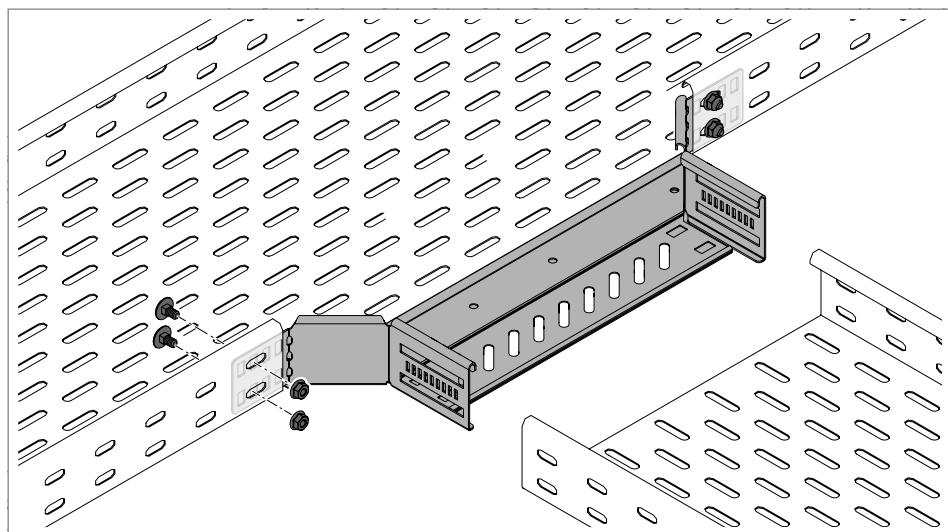

Fig. 52: Screwing the add-on tee on a continuous cable tray

3. Insert the connection straps of the add-on tee to the inner side of the notched-out cable tray rail.
4. Screw the add-on tee to the cable tray rail and cable tray base.

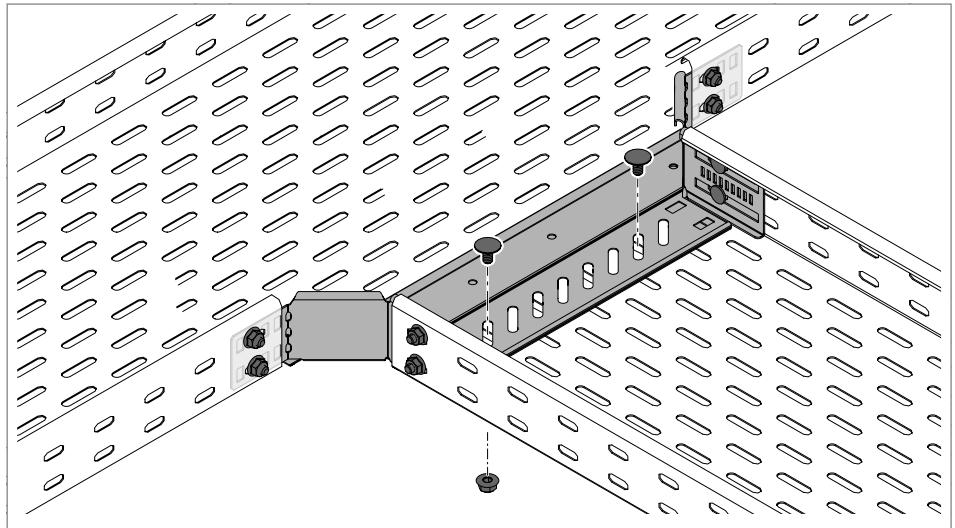

Fig. 53: Screwing the branching cable tray to the add-on tee

5. Push the branching cable tray onto the connection strap of the add-on tee.
6. Screw on the cable tray or fasten with double clamps, see „6.6.2 Mounting fitting on T piece, as example“ on page 34.

6.6.4 Mounting an add-on tee as a reduction

The add-on tee can also be used to create reductions to 100 mm narrower cable trays.

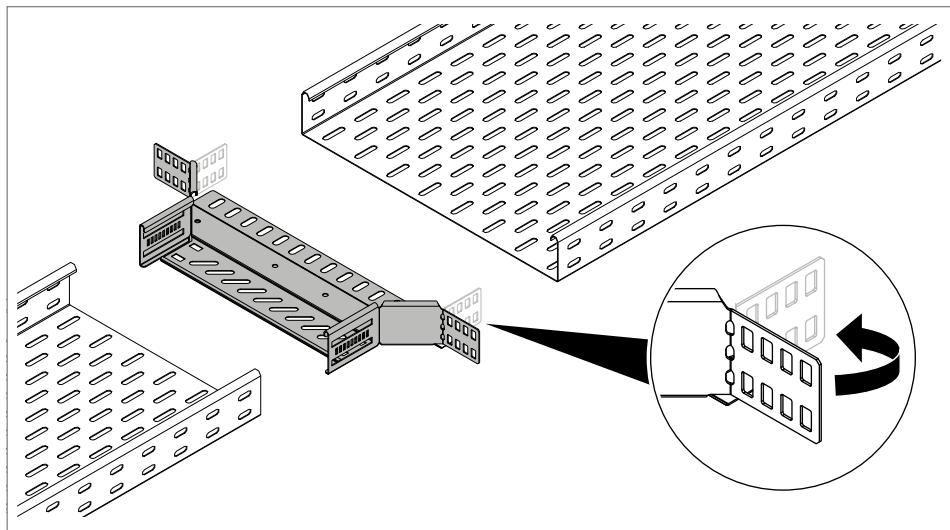

Fig. 54: Bending the connection strap

1. Bend the connection strap of the add-on tee by 90° on both sides.
2. If necessary, cut a cable tray to make a suitable connector perforation.
3. For unperforated cable trays, pre-drill the connector perforation for the add-on tee and joint plate.

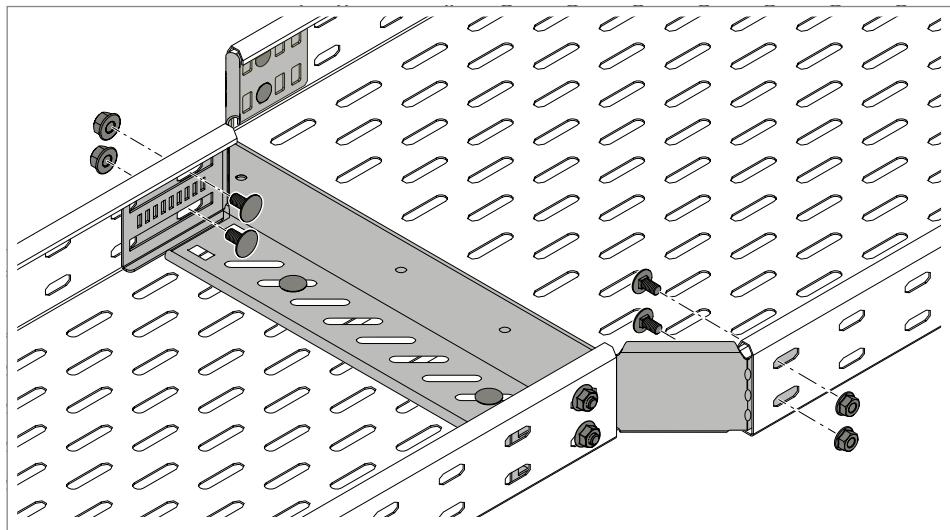

Fig. 55: Screwing an add-on tee on cable trays

4. Push the connection straps of the add-on tee into the cable trays.
5. Screw the add-on tee to the cable tray rails and cable tray base.

6.6.5 Mounting the adjustable bend

The adjustable bend is mounted to create flexible radii of 0–90°.

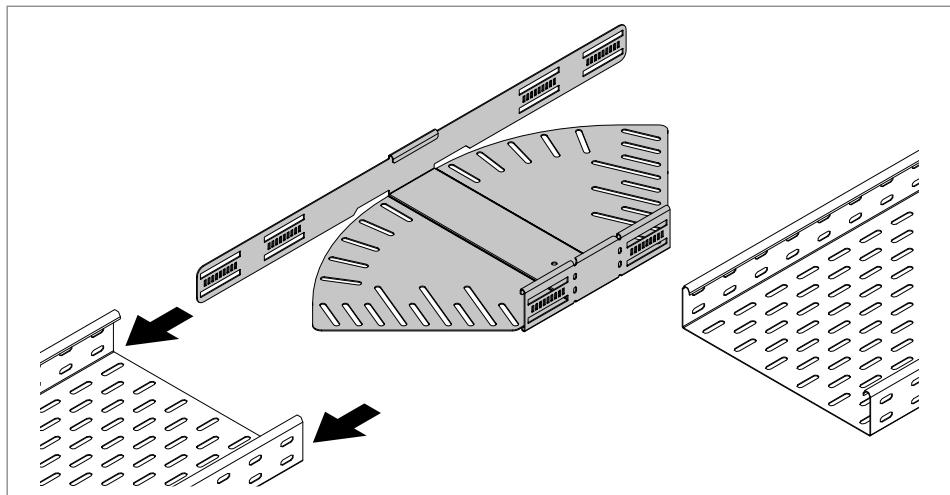

Fig. 56: Inserting the adjustable bend

1. Insert the bend with connection strap into the first tray.

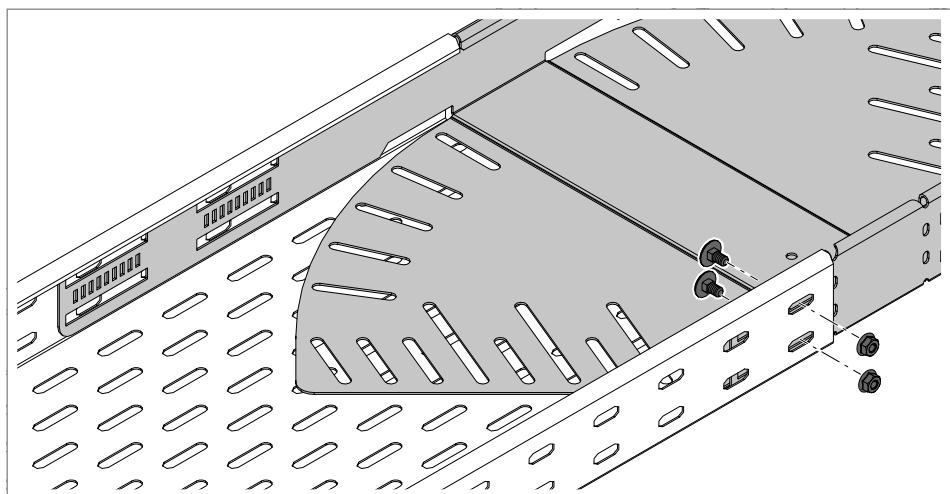

Fig. 57: Fixing the adjustable bend

2. Screw the inner connection strap of the bend to the tray.

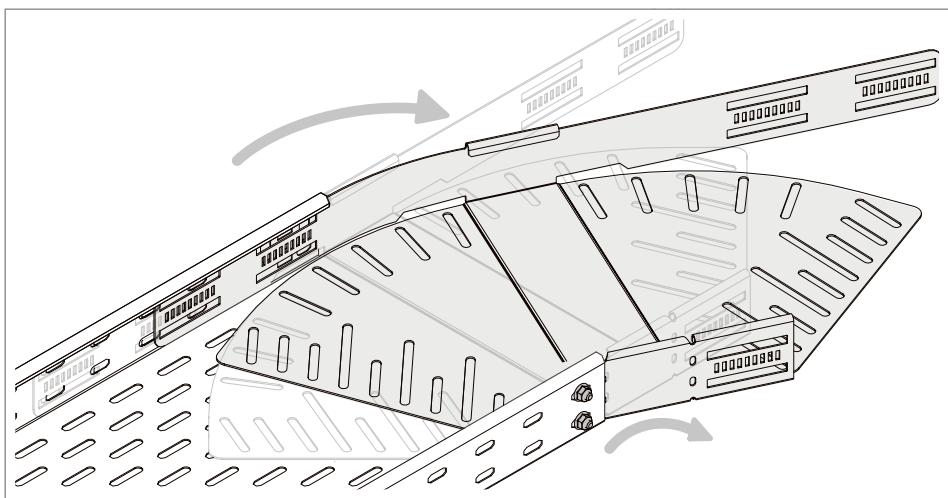

Fig. 58: Bending the adjustable bend

3. Pre-bend the inner connection strap.

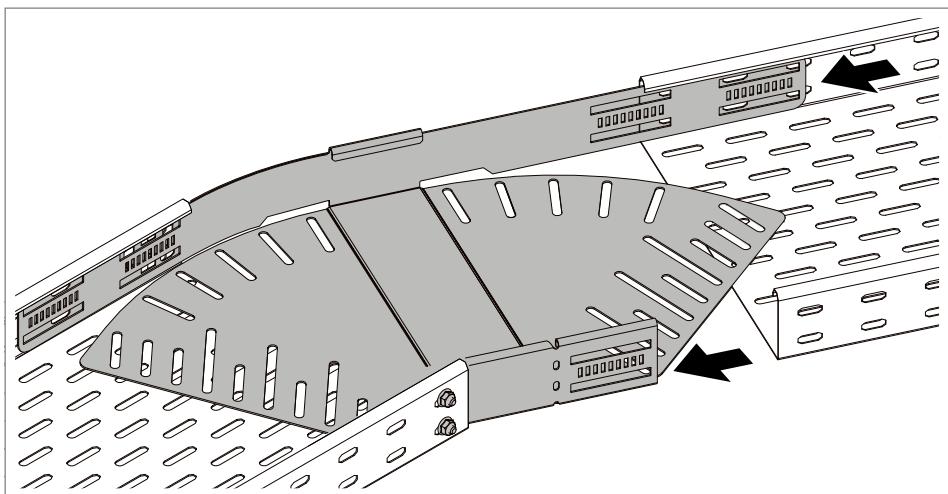

Fig. 59: Pushing the second tray onto the bend

4. Push the second tray onto the connection strap.

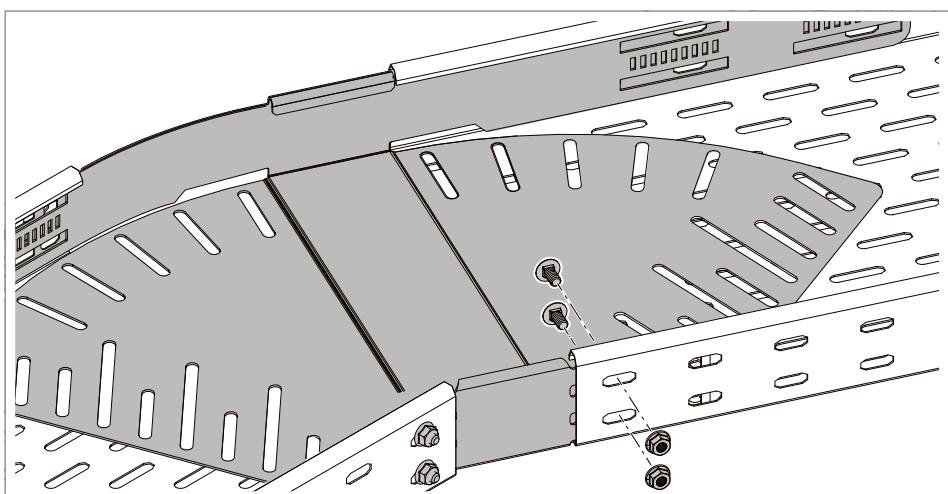

Fig. 60: Fixing the second tray onto the bend

-
5. Screw the inner connector of the bend to the second tray or fasten with DOP double clamp.

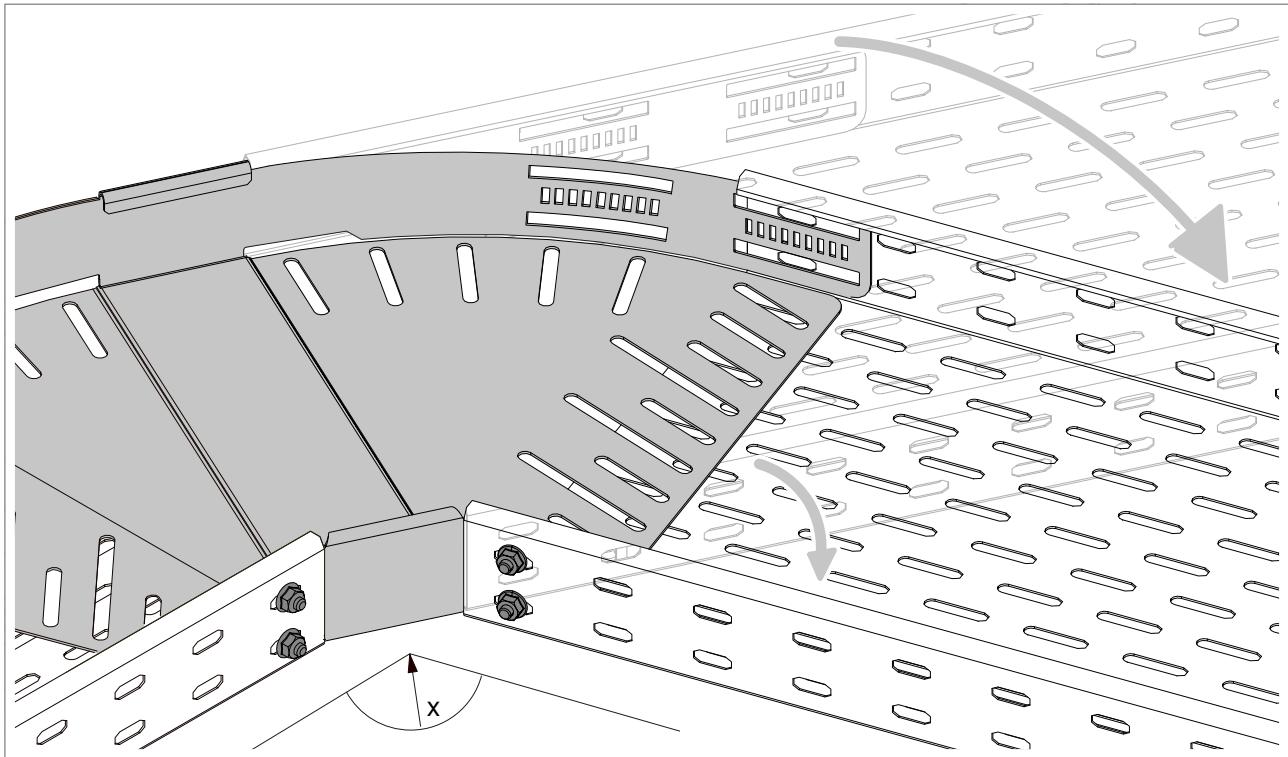

Abb. 61: Bending trays around the inner connector

6. Bend the second tray, or alternatively both trays, around the inner connection strap, to create the final angle x .

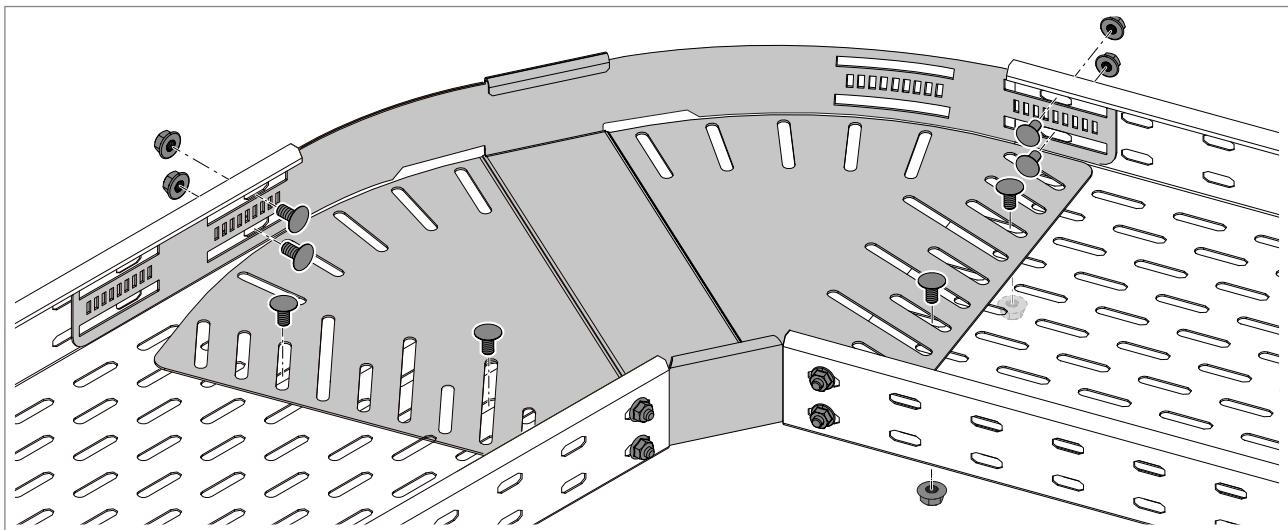

Abb. 62: Screwing connector and joint plate to trays

7. Screw outer connection straps of the bend to the tray or fasten with DOP double clamp.
8. Screwing the joint areas of the bend to the trays

6.6.6 Mounting falling or rising vertical bends

Rising or falling vertical bends are used to route cables in a 90° vertical angle. Vertical bends are available in widths 100–600 mm. Vertical bends have a connector perforation and are screwed on with FRS M6 truss-head bolts and combination nuts.

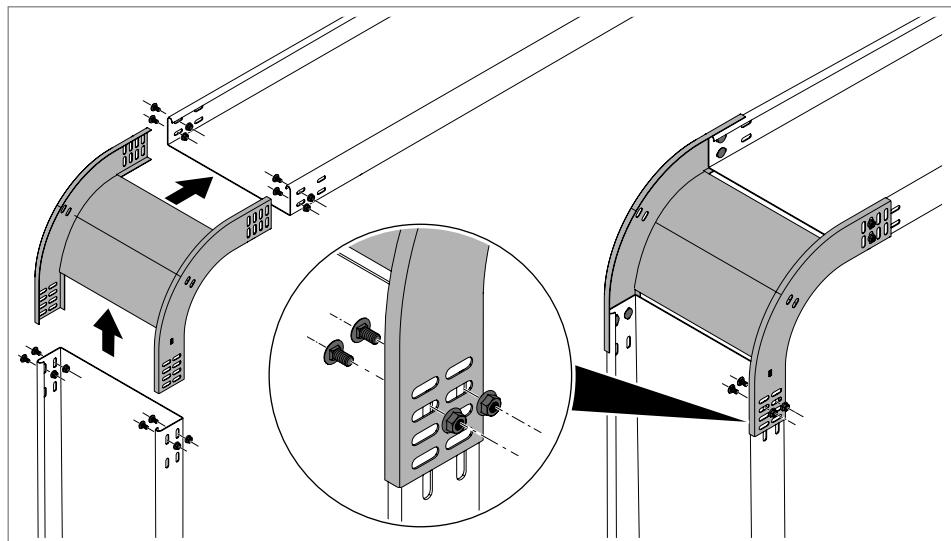

Fig. 63: Mounting a falling vertical bend

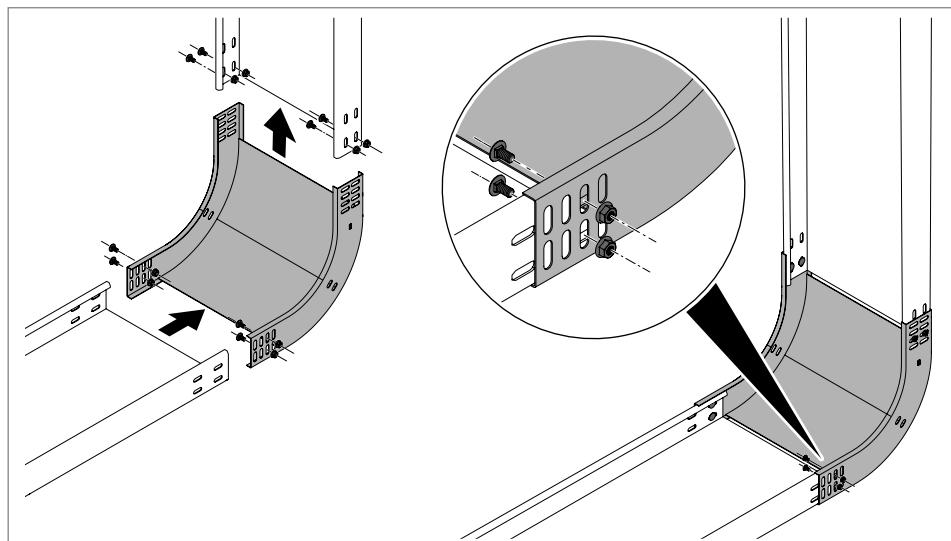

Fig. 64: Mounting a rising vertical bend

1. Push the vertical bend onto the first cable tray. In so doing, the cable tray rails are within the vertical bend.
2. Screw the vertical bend to the first cable tray.
3. Push the second cable tray into the vertical bend.
4. Screw the vertical bend to the second cable tray.

6.6.7 Mounting an adjustable bend element

Adjustable bend elements are used to create height offsets with flexible bends. Adjustable bend elements are mounted on the cable tray with half an adjustable connector and FRS M6 truss-head bolts and combination nuts. Adjustable bend elements are interconnected with SKS M8x16 hinge screws and locking screws. The angles should be flexible. Bottom end plates are mounted at the ends of the cable trays in order to avoid cable damage.

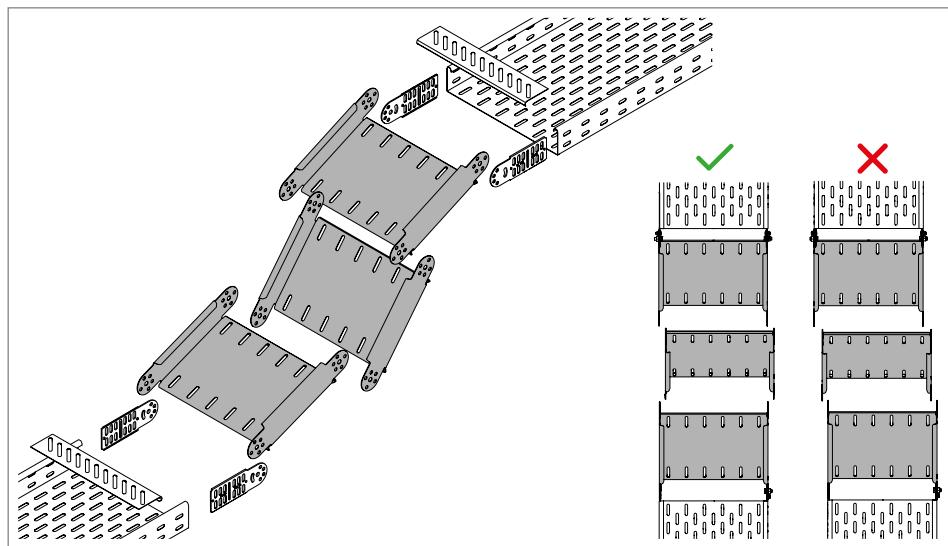

Fig. 65: Adjustable bend element with half an adjustable connector and bottom end plate

Note!

Always arrange adjustable bend elements with alternating offsets in order to avoid a one-sided directional offset.

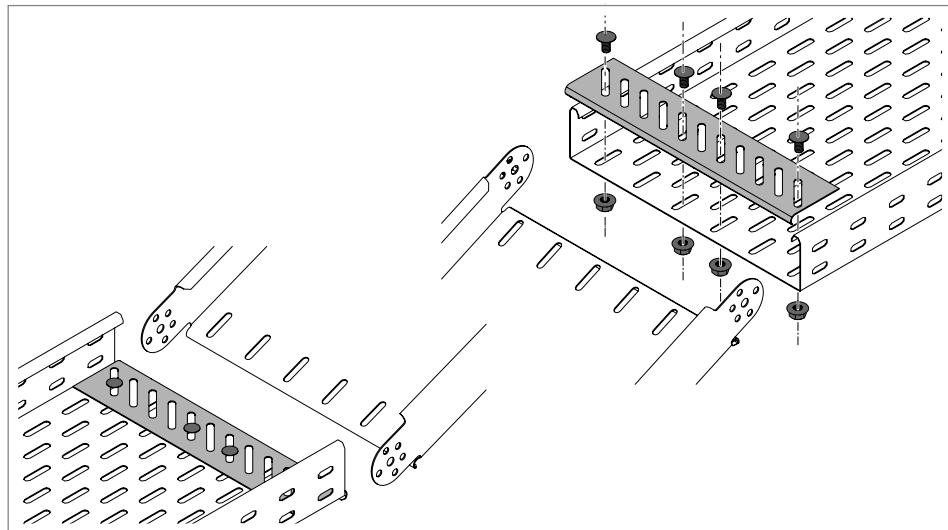

Fig. 66: Mounting a bottom end plate

1. With unperforated cut cable trays, pre-drill the connector perforation for adjustable connectors and bottom end plates.
2. Screw bottom end plates to cable tray bases.

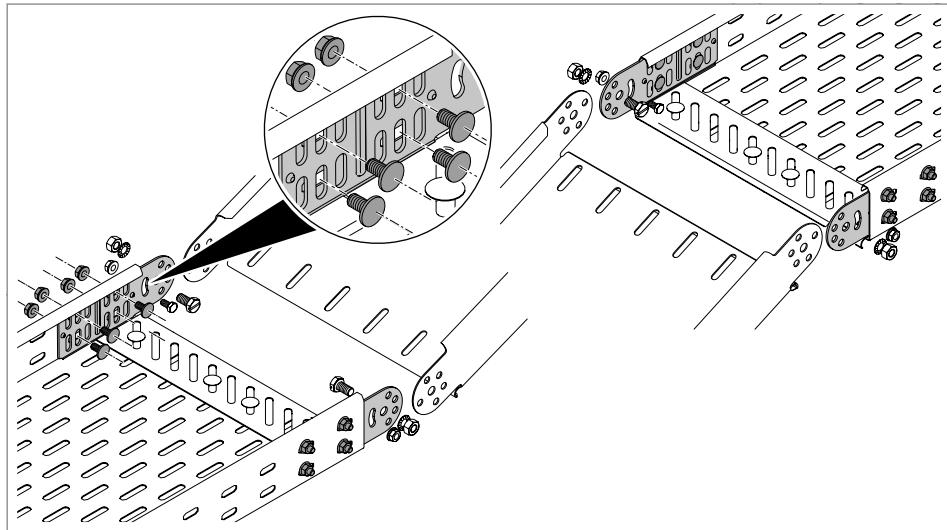

Fig. 67: Mounting adjustable connectors on cable trays

3. Screw the adjustable connector to the inner sides of the rail.

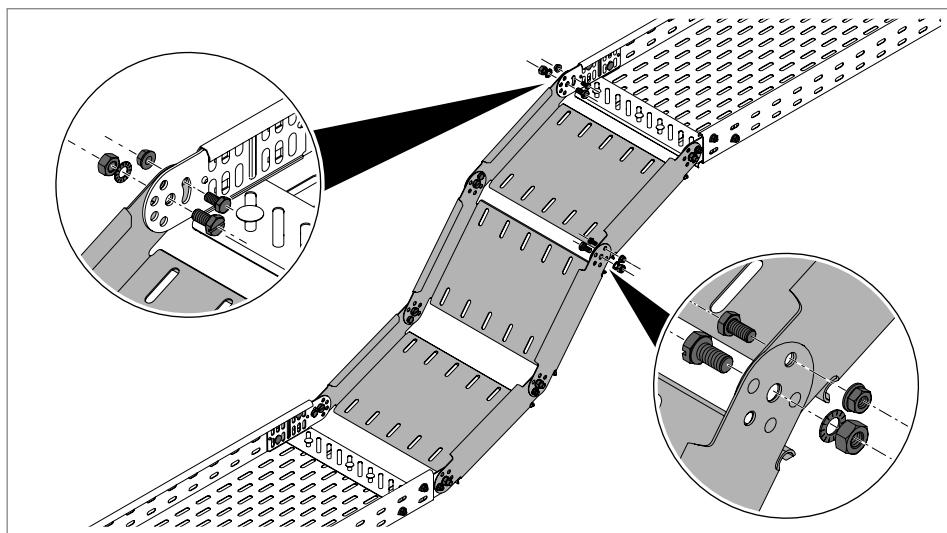

Fig. 68: Mounting adjustable bend elements

4. Fasten adjustable bend elements to adjustable connectors with SKS M8x16 hinge screws.
5. Adjust the angle.
6. Screw on the locking screws in the slot or other available drill hole.
7. Mount other adjustable bend elements with hinge screws and locking screws.

6.6.8 Mounting a reducer profile/end closure

Reducer profiles/end closures are used to reduce tray widths or to close them off completely. Reducer profiles/end closures have a connector perforation and are screwed on with FRS M6 truss-head bolts and combination nuts.

Mounting a reducer profile

1. With unperforated cut cable trays, pre-drill the connector perforation for connectors, reducer profile and joint plates.

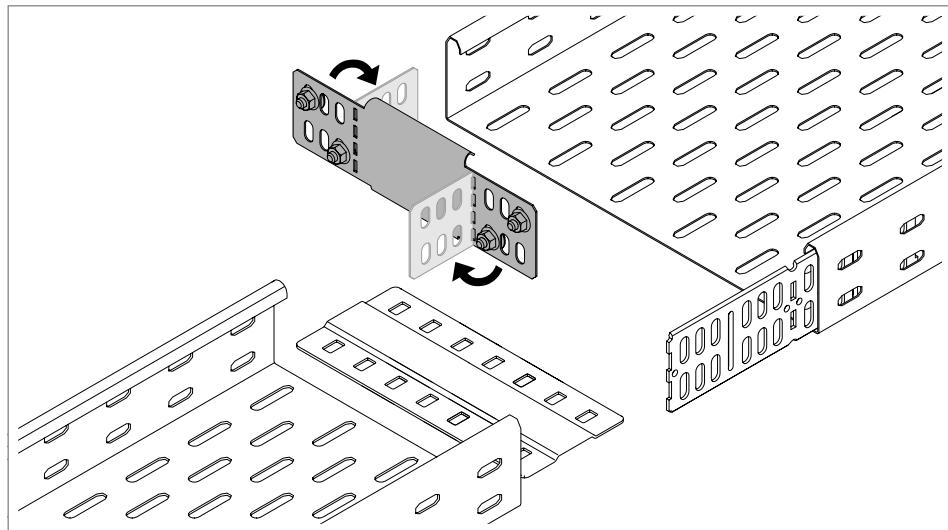

Fig. 69: Bending a reducer profile

2. Bend straps on the reducer profile by 90°.

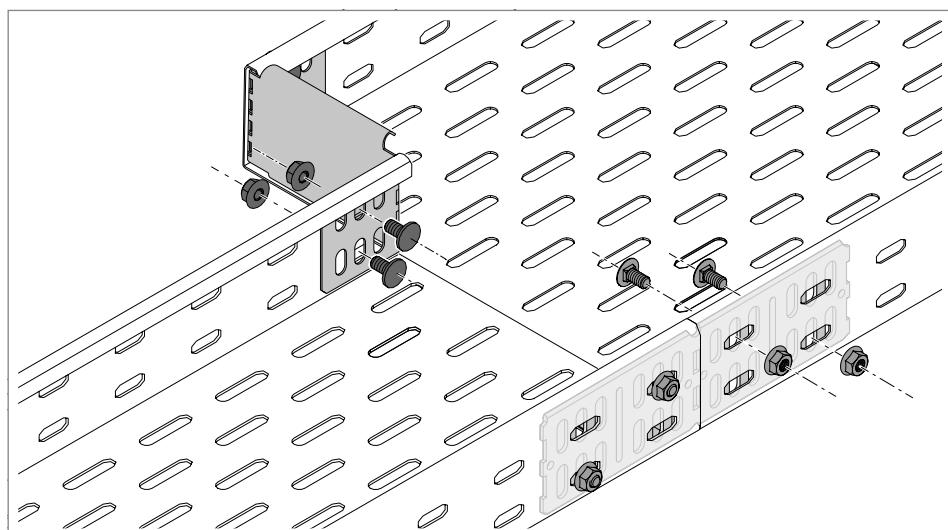

Fig. 70: Mounting a straight and angle connector and reducer profile

3. Screw on the RWVL straight and angle connector to the inner side of the rail.
4. Screw the reducer profile to the inner sides of the rail.

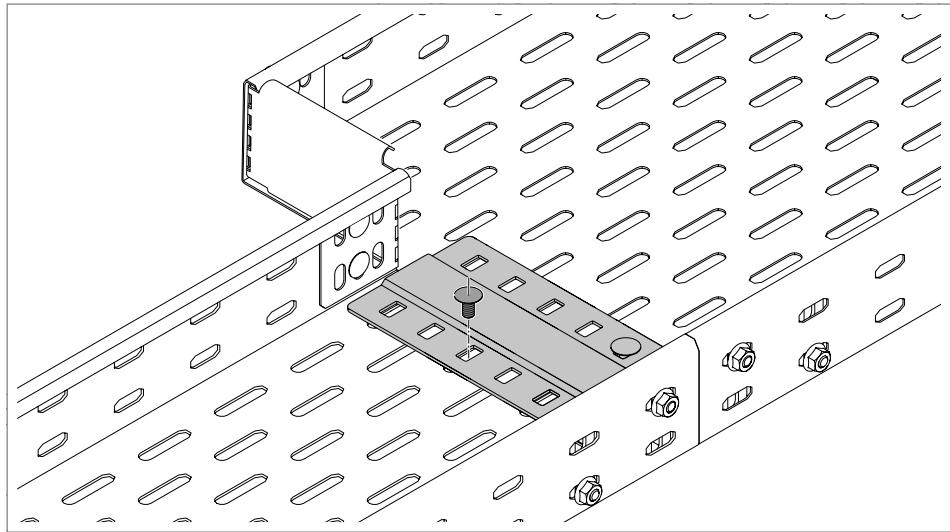

Fig. 71: Screwing on the joint plate

5. Screw on the joint plate.

Mounting a stop end

1. With unperforated cut cable trays, pre-drill mounting perforations.

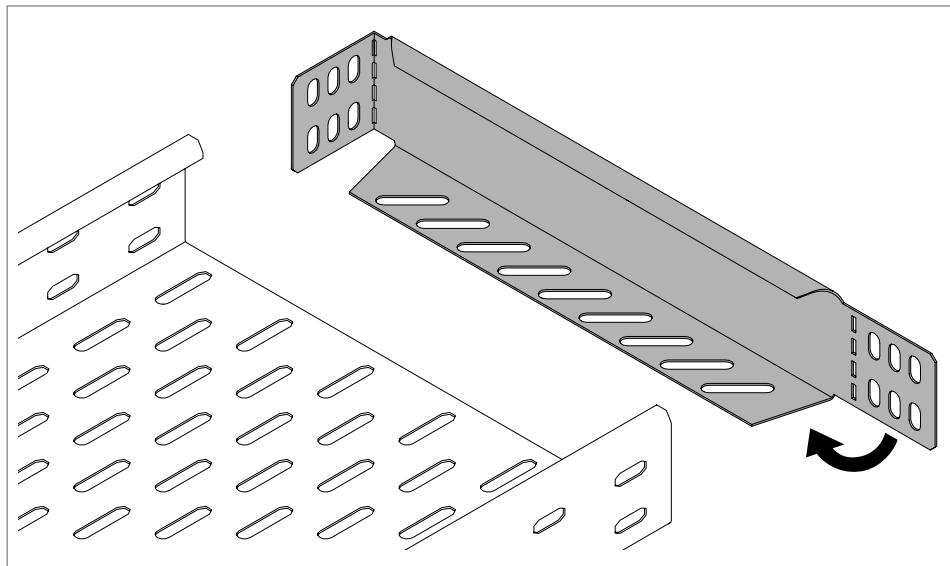

Fig. 72: Bending a strap

2. Bend the straps on the end closure 90° inwards.

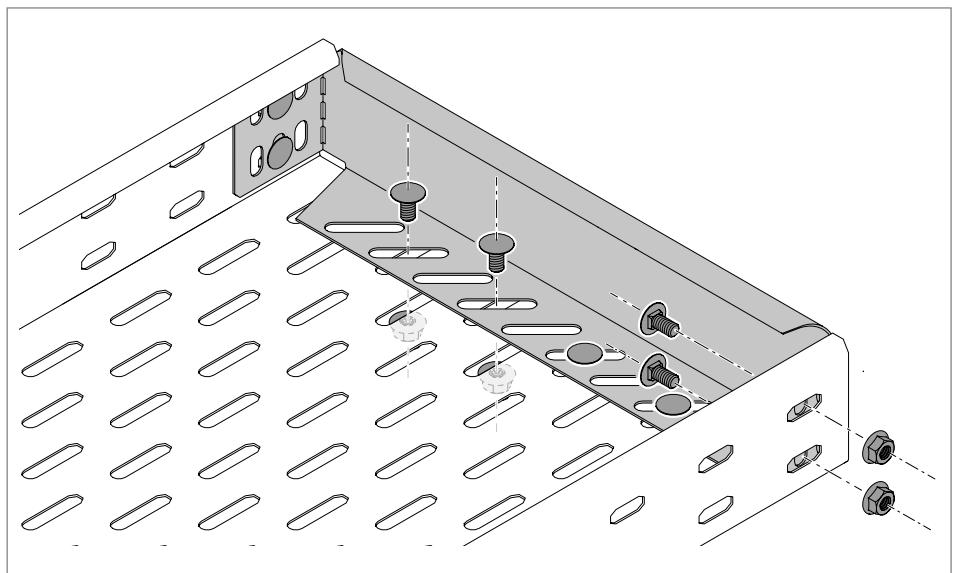

Fig. 73: Mounting an end closure

3. Push the end closure into the cable tray. In so doing, the straps touch the inner edge of the rail and the cable tray base.
4. Screw on the end closure.

6.7 Mounting a barrier strip

Barrier strips are used to route and separate cables with different functions or voltages in a cable tray. Barrier strips are mounted in the cable tray with FRS M6 truss-head bolts and combination nuts. Alternatively, the KS KR hold-down clamp can be used for the RKSM tray type.

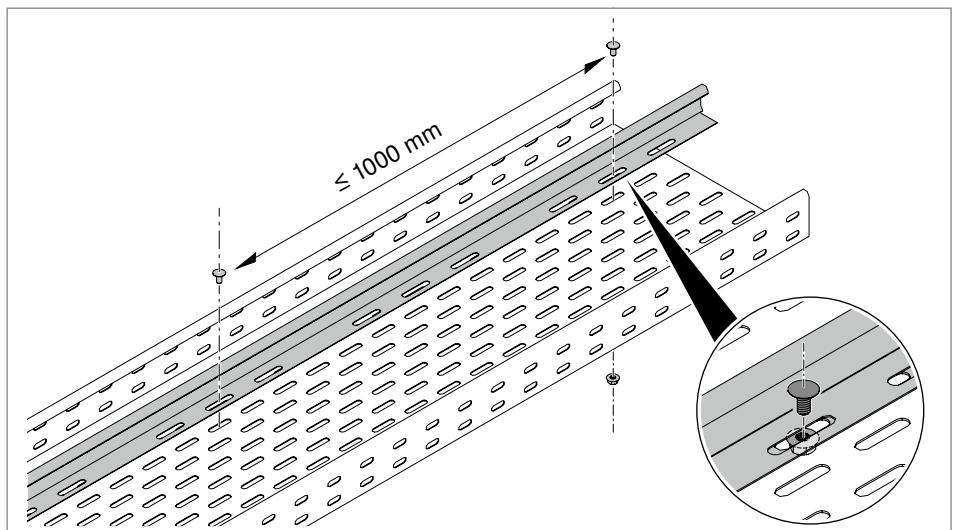

Fig. 74: Screwing on a barrier strip

1. With unperforated cable trays, pre-drill mounting perforations.
2. Screw on the barrier strip.

6.7.1 Connecting barrier strips with a barrier strip connector

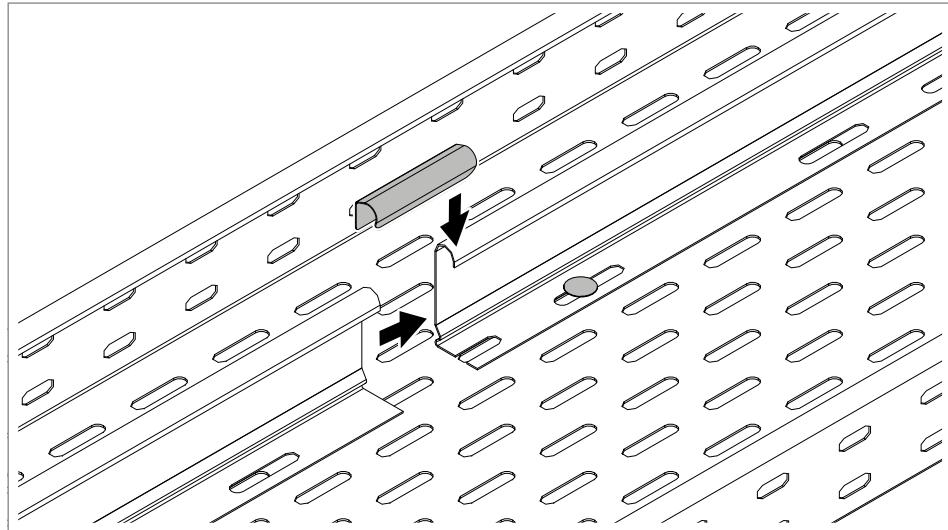

Fig. 75: Connecting barrier strips

1. Position the barrier strips next to each other.
2. Clamp the barrier strip connector at the joint.

6.8 Creating equipotential bonding

Note!

We recommend that the latchable cable tray system is integrated into the equipotential bonding.

The equipotential bonding is created using an earthing terminal.

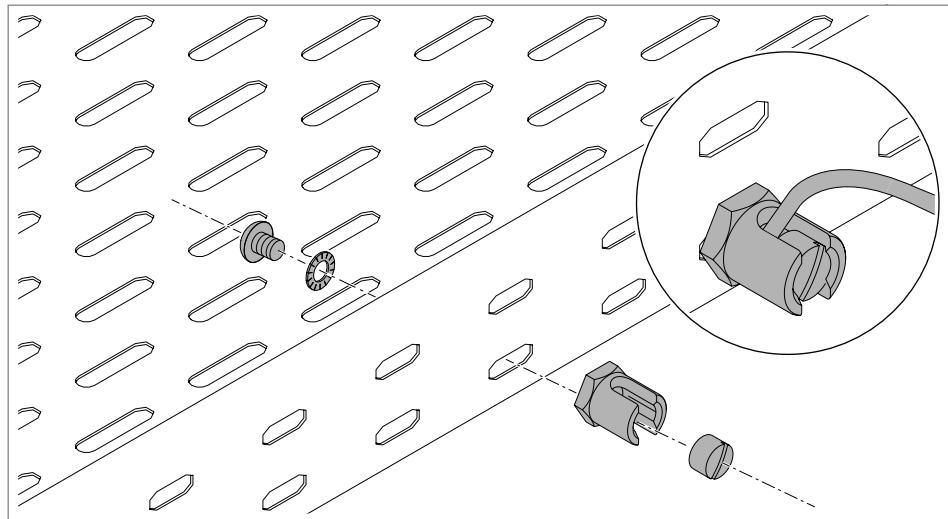

Fig. 76: Mounting the earthing terminal

1. Drill a hole in the cable tray rail if it does not yet exist.
2. Screw the earthing terminal on the cable tray rail with an FRSB 6x12 screw.
3. Electrically connect the earthing terminal to the overall equipotential bonding.

6.9 Mounting covers

Covers can be mounted as follows:

- With cover clamps
- With turn buckles mounted at a later date
- With pre-mounted turn buckles

6.9.1 Mounting a cover with a cover clamp

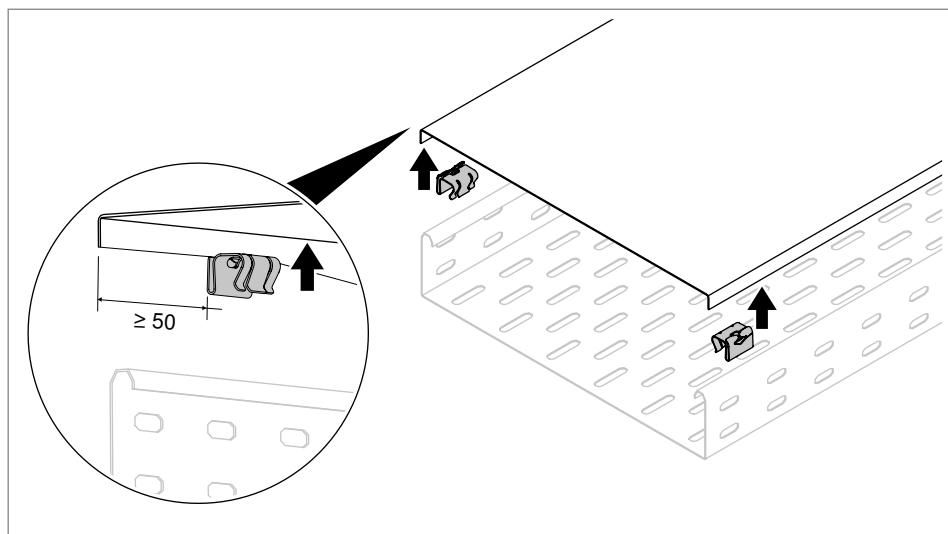

Fig. 77: Clamping the cover clamp to the cover

1. Clamp the cover clamp to the edge of the cover. Distance from the front edge at least 50 mm.

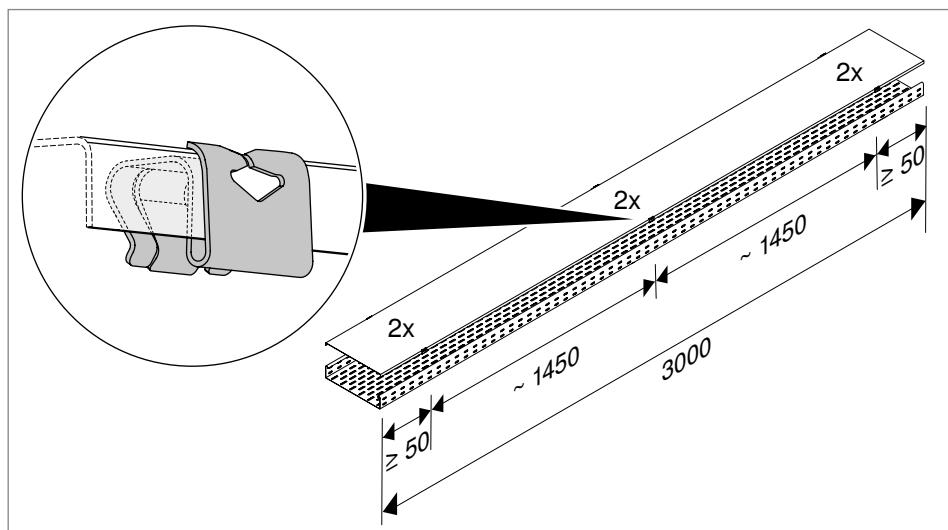

Fig. 78: Distribution of the necessary number of cover clamps

2. Mount at least 3 x 2 cover clamps for each 3,000 mm cover length. Distance between the clamps approx. 1,450 mm.

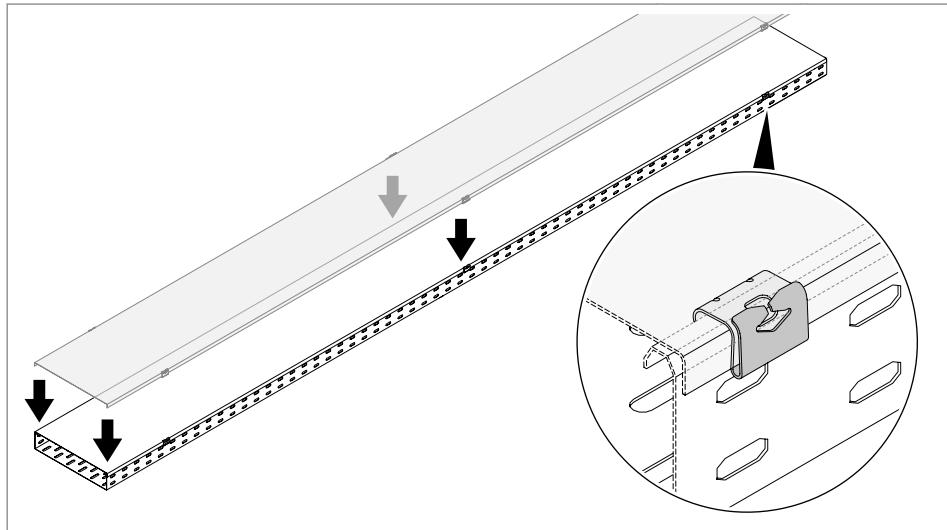

Fig. 79: Latch on the cover.

3. Latch the cover onto cable tray rails using cover clamps.

6.9.2 Mounting a cover with turn buckle

Turn buckles are either pre-mounted at the factory or can be mounted at a later date in the case of unperforated covers. Depending on the type, the turn buckle is screwed or riveted to the cover. In both cases, the holes must be pre-drilled in the cover. The cover is mounted on the cable tray using pre-mounted turn buckles in the same manner as with those installed at a later date.

Mounting a turn buckle

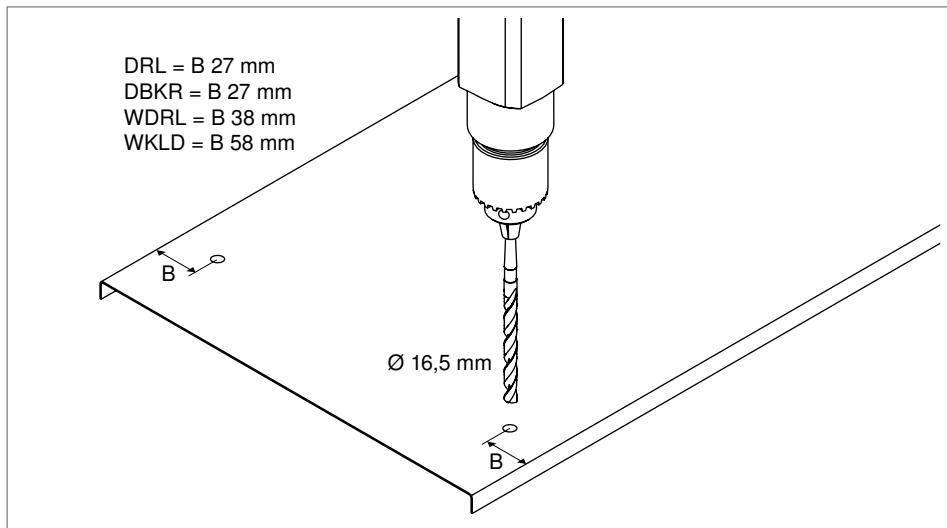

Fig. 80: Pre-drill the cover

1. Pre-drill the cover. Distance B from the edge dependent on cover type.

Note!

Fitting covers have been stamped with punch-marks in the factory, which mark the appropriate locations for mounting additional turn buckles.

-
2. Insert the turn buckle button through the hole in the top of the cover.

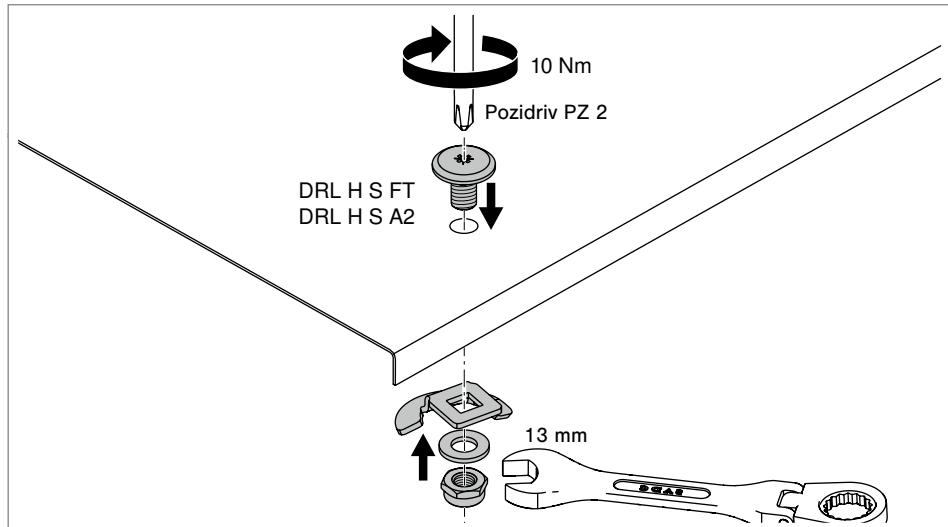

Fig. 81: Screwing on the turn buckle

3. Screw the turn buckle and hexagonal nut on the underside of the cover with the washer and turn buckle button.

Or:

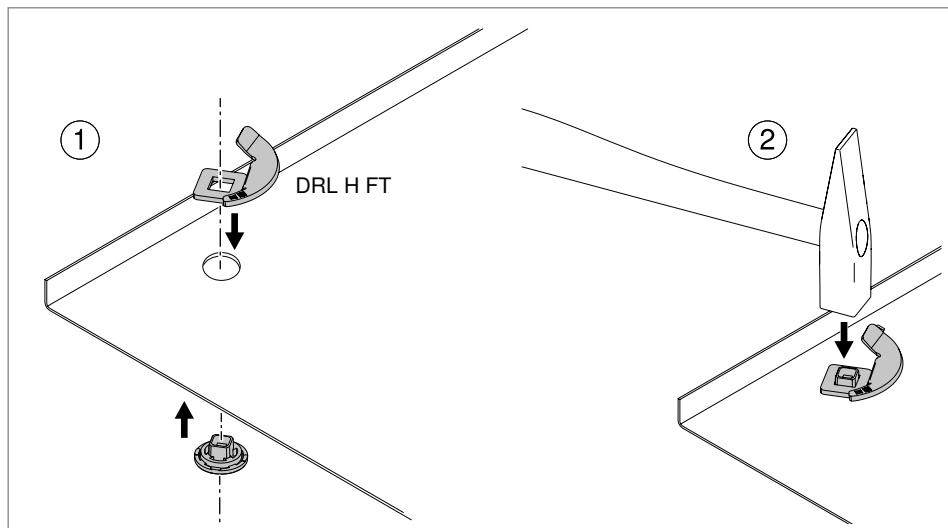

Fig. 82: Riveting the turn buckle

4. Rivet the turn buckle on the underside of the cover with the turn buckle button.

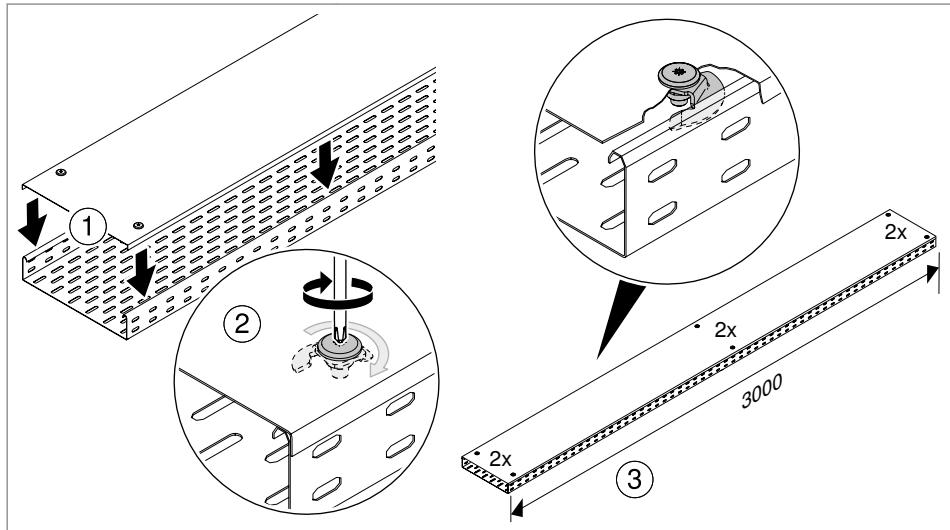

Fig. 83: Mounting the cover with Helix turn buckle

5. Mount at least 3 x 2 turn buckles for each 3,000 mm of cover length.
6. Position the cover on the cable tray.
7. Lock the turn buckle button on the cable tray using a screwdriver.

6.9.3 Mounting fitting cover

The fitting covers are supplied with either no, one or multiple pre-mounted turn buckles, depending on the fitting. Due to the particular shape of the sheet metal, the fitting cover is held in place additionally or exclusively by the section cover. The mounting of additional turn buckles is performed as described in chapter „6.9.2 Mounting a cover with turn buckle“ on page 52.

Note!

Fitting covers have been stamped with punch-marks in the factory, which mark the appropriate locations for mounting additional turn buckles.

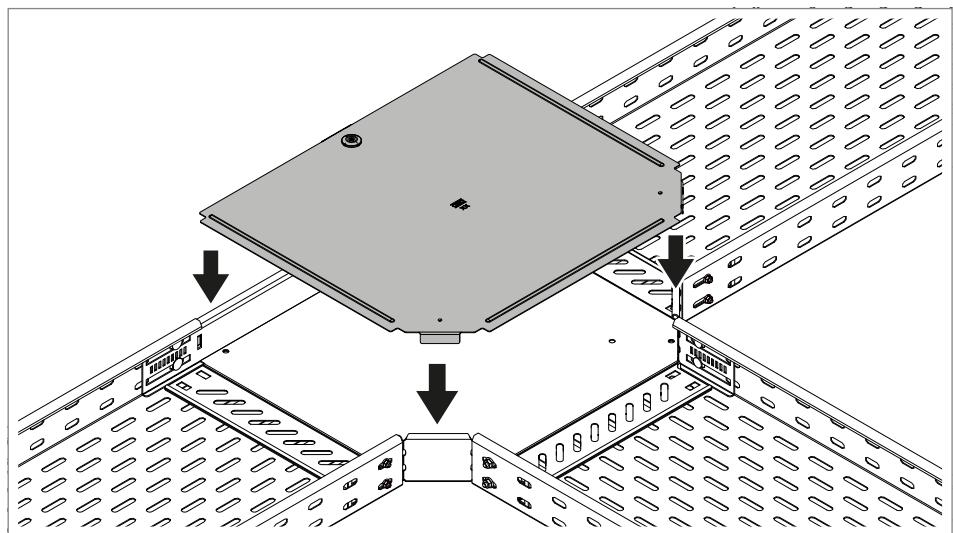

Fig. 84: Positioning a fitting cover

1. Position the fitting cover on the fitting so that the straps lie against the outside of the rail.

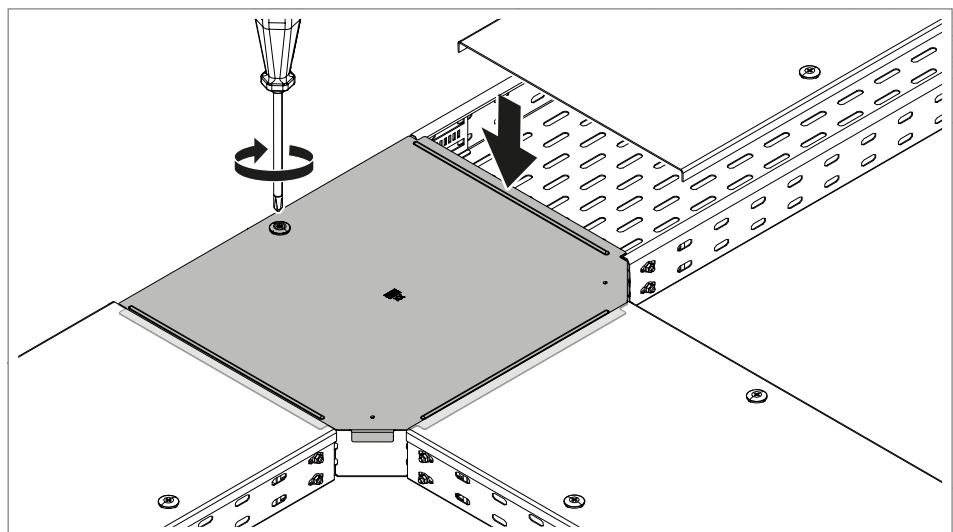

Fig. 85: Securing fitting cover with path covers

2. Lock turn buckle.
3. Place the path cover in such a way that the sheet ends of the fitting cover are covered.

7 Maintaining the system

The stability and function of the screw-on cable tray systems can be impaired by external influences, such as damage or machine vibrations.

Loose connection elements must be retightened and damaged parts replaced. The connection to the overall equipotential bonding must be continually intact and thus checked regularly.

8 Dismantling the system

All the elements of the cable tray systems are dismantled in the reverse order to the mounting.

A cover lifter (item no. 6049285) can be used to dismantle the covers mounted with cover clamps.

9 Disposing of the system

Comply with the local waste disposal regulations.

- Metal: As scrap metal
- Plastic parts: As plastic
- Packaging: As household waste/as metal (depending on packaging type)

10.2 Amount of fastening material

The number of necessary screws and double clamps varies according to the type of fitting and its width and height. Irrespective of the screw or clamp connection, additional screws are necessary for the fastening of the integrated joint plates. The following tables list the recommended amount of fastening material. Fittings with the side height of 35 mm can only be screwed on.

10.2.1 Recommended amount of fastening material for each screw connection
